

DAIMLER TRUCK NORTH AMERICA LLC

23 February 2022

Important Notice

Due to the way in which this vehicle was configured, the vehicle does not display the Cruise Control telltale on the instrument cluster when the Cruise Control system is turned On. All other Cruise Control functionality works as intended, including the driver's ability to disable Cruise Control by engaging the brakes.

Daimler Truck North America LLC has reviewed this functionality and has determined that it does not pose a risk to vehicle safety and that it is compliant with regulations. However, some vehicle operators are accustomed to having an indicator lamp that is illuminated when the Cruise Control system is activated. Out of an abundance of caution, Daimler Truck North America LLC is providing a dash sticker for those vehicles that do not display the Cruise Control telltale.

Daimler Truck North America LLC will release a Customer Satisfaction Campaign later in 2022. This Campaign will update the vehicle to implement functionality of the Cruise Control telltale.
