

Launch Date: Wednesday, February 2nd 2022

Release Notes: With this update, we're launching an additional DreamDrive feature: Adaptive Cruise Control. We're also making improvements to charging and other vehicle systems.

Before beginning this update, make sure your vehicle is not plugged in.

- DreamDrive Part 2: This second DreamDrive update delivers another feature to improve your highway driving experience: Adaptive Cruise Control. While driving on a highway, Adaptive Cruise Control will smoothly maintain your desired set speed and alert you to speed limit changes. The system also detects vehicles in front of you and automatically adjusts your cruising speed, so you maintain a safe following distance. You can learn more about this feature in your digital owner's manual. This feature is not a replacement for attentive driving. You are responsible for maintaining control of your vehicle at all times.
- Vehicle: A comfortable driving experience isn't just about what you can see, it's also about what you can touch. We've improved how some of the most commonly used parts of your vehicle operate, including the charge port door, trunk, door handles, and sunshades. We fixed an issue where your door handles might not immediately extend after unlocking. We also added the ability to open the charge port door and trunk whenever a recognized key fob is in range, even if the vehicle is locked.
- Access & Profiles: We improved Mobile Key functionality, so your vehicle recognizes your phone more easily and unlocks upon approach.
- Charging: We've improved the accuracy of estimated remaining charging times for both normal and fast charging. We also updated the user interface to display the power delivered by the charging cable instead of the power received by the battery. We made improvements for charging in extremely cold weather as well as to both normal and fast charging control.
- Other Minor Updates: Exterior lighting improvements, LiDAR improvements, vehicle camera improvements, and other minor charging updates, improvements and fixes.

Estimated Install Time: 30 minutes

- In order to receive 1.1.5, 1.1.4 must already be installed.
- Lucid recommends customers update their Lucid mobile application prior to initiating the installation of the software update.
- The vehicle cannot be plugged into a charger during this update.
- Customers no longer need to disconnect from WiFi prior to installation.
