

**Launch Date:** Wednesday, February 16th 2022

**Release Notes:** With this update, we are providing a better user experience for your Lucid Air with general enhancements and fixes, including to seat massage, certain advanced driver assistance system notifications, and door handle operation. Before beginning this update, make sure your vehicle is not plugged in.

- We fixed an issue that may have interrupted your seat massage early.
- We adjusted the sensitivity of the Distracted Driver Alert and Drowsy Driver Alert to more accurately detect unattentive driving. These features are not a replacement for attentive driving. You are responsible for maintaining control of your vehicle at all times.
- We improved door handle operation, especially in cold weather when ice might be blocking the handles.
- Other minor updates, improvements, and fixes.

**Estimated Install Time:** 1 Hour

- In order to receive 1.1.7, 1.1.61 must already be installed.
- Lucid recommends customers update their Lucid mobile application prior to initiating the installation of the software update.
- The vehicle cannot be plugged into a charger during this update.
- Doors and trunks must be closed and locked prior to install.
- Keys, including mobile phones, must be kept at least 30 feet away from the vehicle during install.
- Customers no longer need to disconnect from WiFi prior to installation.
- Do not open any doors or trunks until install is complete.
