## SUBJECT: FUEL SYSTEM DESIGN CHANGE

### PURPOSE

Indian Motorcycle has implemented a fuel system running change for 2022 Scout models.

### AFFECTED MODELS

MODEL YEAR	MODELS
2022	Scout

### FUEL SYSTEM PARTS DETAILS

It is important that the correct fuel pump and baffle are installed with the corresponding fuel tank. The fuel pickup baffle controls fuel slosh, ensuring the engine has adequate fuel delivery in all situations. Failure to install the correct fuel pick up baffle and fuel pump may result in poor motorcycle performance.

- Motorcycles with the previous style have the fuel pickup baffle built into the fuel tank.
- Motorcycles with the new style will have the fuel pickup baffle as a separate part from the fuel system.

To check what part is equipped, inspect the under side of the fuel tank for a label that has the part number. The fuel pump also has a label with the part number.

	FUEL TANK	FUEL PICKUP BAFFLE	FUEL PUMP
Previous Style	1024443	(welded in, part of tank)	2521733
New Style	1026918	5418280	2522545

### NOTICE

Always refer to the appropriate parts book when ordering replacement parts.
