

New Release

The electric auto reversing door feature is now available on the EFX. You can now receive the auto reversing feature on all door platforms across all our products. The feature will operate identically to the C2. The system will automatically open the entrance door if an obstruction is detected between the leafs. The system will be disabled after 5 unsuccessful attempts to close the door. The system functionality can then be restored by cycling battery power or after 2 hours of vehicle operation. See Trello for a live demonstration of the feature!

Features and Benefits

- Audible indicator that system has been engaged
- Pilot light over the door to indicate the status of the system- Red lamp illuminates that the system is disabled
- Reduced downtime risk with the disabling feature
- TBB advantage offering

Ordering

Change orders for committed orders will be considered based on part availability. Contact Justin Bullins for any additional questions.
