

## **SSM 50788 - 2022 F150 Lightning - Phone-As-A-Key Feature Not Enabled**

2022 F-150 Lightning vehicles equipped with the Phone-as-a-Key feature will require a software update to enable this feature, which is expected to deploy to vehicles via an over-the-air (OTA) software update late summer of 2022. This feature is currently not enabled, and customers will not have the option to set up Phone-as-a-Key upon vehicle delivery. No repairs should be attempted at this time. To ensure vehicles can receive OTA software updates, customers should make sure their Vehicle Connectivity Settings are set to ON. Additionally, a software update for the remote function actuator (RFA) module is expected to be available in Ford Diagnosis and Repair System (FDRS). Continue to monitor OASIS for updates.
