Release Date: February 2022

Symptom/Vehicle Issue: The Odometer Is Flashing / Blinking

Discussion: On the WL and WS, a flashing or blinking odometer indicates that not all modules are aligned. When modules are not aligned, the flashing or blinking odometer may be associated to DTC B2204-XX Configuration Mismatch set in any module.

Possible causes for a module to not be aligned

- Module software update
- Module replacement
- Dead Battery
- Restore Vehicle Configuration routine recently completed

If a vehicle will not complete the Proxi Configuration Alignment routine in the Guided Diagnostics Menu in wiTECH 2.0. There could be an underlying vehicle issue and/or non-responsive module due to a module issue and/or wiring issue.

This document does not authorize warranty repairs. This communication documents a record of past experiences. STAR Online does not provide any conclusions about what is wrong with the vehicle. Rather, it captures all previous cases known that appear to be similar or related to the vehicle symptom / condition. You are the expert, and you are responsible for deciding on the appropriate course of action.
