1	07/17/2019	Initial publication

Customer states:

- After a short stationary period, the vehicle sporadically does not start and there is a hard brake pedal concern.

Technical Background

Due to dirt particles in the non-return valve in the vacuum hose for the brake servo, the vacuum in the brake servo cannot be held on a parked vehicle.

When starting the vehicle the usual brake force is not enough to get the start authorization of the brake light switch.

Normally, a vacuum of 600 to 950 mbar is reached.

Depending on the parking position (slope) or the user behavior the vehicle is parked with a small vacuum within 12 hours the vacuum may drop by up to 400 mbar.

Production Solution

Technical Service Bulletin

Not applicable.

Service

Replace the "vacuum hose with non-return valve and pressure sensor – G608" according to the Elsa Repair Manual, *Elsa >> Brake System >> 47 Hydraulic Components >> Vacuum System*.

Warranty

Claim Type:	<ul style="list-style-type: none">• 110 up to 48 Months/50,000 Miles.• G10 for CPO Covered Vehicles – Verify Owner.• If the vehicle is outside any warranty, this Technical Service Bulletin is informational only.
