Title: Side Mounted Cab Extender Fins that provide more flexibility during trailer contact

Applies To: International LT & LoneStar Trucks with the cab extenders that have the stiff black tail fins.

CHANGE LOG

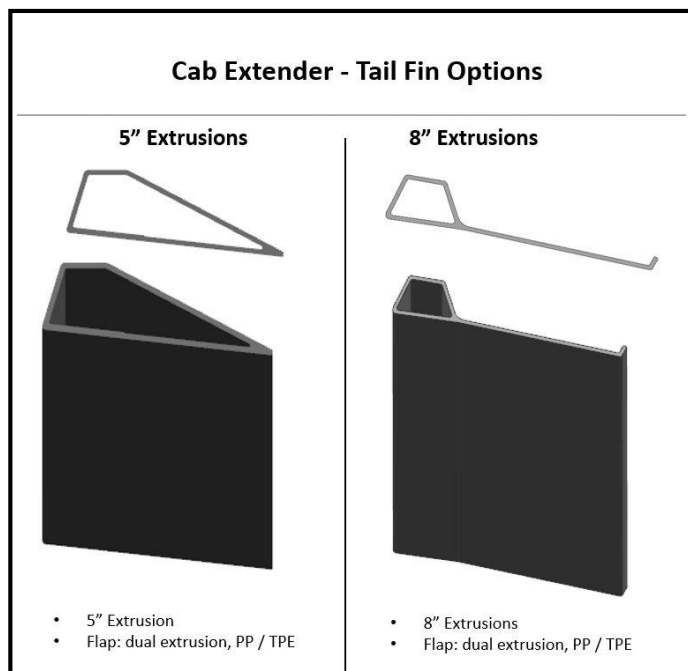

Please refer to the change log text box below for recent changes to this article:

06/21/2022 - Initial Article Released

DESCRIPTION

This document will guide the user through when and how to replace the 5" black plastic stiff tail fin on the cab extenders with an 8" P-shaped flexible tail fin. Each tail fin style fits and mounts to the same surfaces of the cab extender panel.

NOTE: There are a couple of cab extender configurations where the 5" tail fin should NOT be replaced with the 8" P-shaped tail fin due to durability concerns of the cab extender structure. So follow the guidelines in this article when changing over from the 5" stiff tail fin to the 8" flexible tail fin.

SYMPTOM(s)

The black plastic tail fins is either missing or loose mainly caused from trailer contact.
