SEAL TOFINO FRONT ROOF CLEARANCE LIGHTS, ANTENNA, PERMITER CAP

1. Clearance lights ---add silicone sealant to the clearance lights. It should fill any gap that may be left over when tightening down. Screws should be sealed so should have no issue.
You may even have to put some in the screw holes before a screw is put through the lens.

We use Dowsil 733 RTV sealant which is clear in color. You can either do a perimeter seal on the lights or you can remove and add sealant to the bottom of the light and re-secure.
Any clear silicone whatsoever should do the job,

2. Sirius radio antenna ---just silicone around antenna base.

3. Perimeter cap---regarding the perimeter of the cap it is sealed on the back end and wiped clean in the front but the tech can run a perimeter seal with silicone if they would like.

4. Stains ---clean stains
