- 1.) Remove the failed A/C compressor from the vehicle. (Reference appropriate service manual for removal instructions.)
- 2.) Failed compressor: Cut tie strap securing the connector to the compressor body, push back protective sheathing, then cut the compressor harness 2 inches away from the connector (**Figure 1**).
- 3.) Replacement compressor: Cut tie strap securing the connector to the compressor body, push back protective sheathing, then cut the compressor harness 2 inches away from the connector (**Figure 2**).
- 4.) Using the procedure found in [IK0800269 - Proper Wire Repair](#), splice the connector and pigtail from the failed compressor on to the replacement compressor harness (**Figures 3 and 4**)
