Involved Region or Country: North America

Condition: Some customers may comment on various inoperative component issues resulting from pushing any of the buttons on the driver’s front door switch bank:
- Power windows
- Door locks
- Outside mirror control
Some customers may also report unwanted activation of the theft alarm system, or random messages on the DIC such as “service latch”.

<th>Cause</th>
<th><img src="image_url" alt="Image of failed seal" /></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Note:</strong> The image above depicts a close-up of a failed seal below the drivers side windshield area. This condition may be caused by The Driver’s Front Door X500 in-line connector may have corroded terminals due to a water leak entering inside the upper A-Pillar through the panels not sealed properly.</td>
<td></td>
</tr>
<tr>
<td><strong>Correction</strong></td>
<td>Open the X500 and inspect for corroded terminals. Perform water leak test on suspected sheet metal area, reseal, re-test for leaks. Repair and or replace X500 terminals as required.</td>
</tr>
</tbody>
</table>

**Important:** Service agents must comply with all International, Federal, State, Provincial, and/or Local laws applicable to the activities it performs under this bulletin, including but not limited to handling, deploying, preparing, classifying, packaging, marking, labeling, and shipping dangerous goods. In the event of a conflict between the procedures set forth in this bulletin and the laws that apply to your dealership, you must follow those applicable laws.
Service Procedure

1. Open the drivers side door.

2. Remove the bolt (1) that secures the doors check strap to the A-pillar.
3. Remove the X500 connector cover (1).
4. Disconnect the electrical connector.
5. Inspect the door side connector terminals for corrosion.

6. Utilizing a mirror or equivalent, inspect the A-pillar side connector terminals for corrosion.
Note: The graphics above is an example of what the corrosion may look like in the X500 connectors

- If corrosion is found at the door side connector (1) or the instrument side connector (2), continue to step 7.
- If corrosion is not found on the connectors, refer to step 14.

7. Remove the driver side door. Refer to Front Side Door Replacement in SI.

Note: Clean the terminals if at all possible. Only replace the terminals if corrosion has entered the wire.

8. Clean or Repair the terminals that only require attention. Refer to Connector Repairs in SI.

9. From inside the vehicle, separate the instrument panel side wiring harness (3) from the A-pillar panel (4).

10. Disconnect the instrument panel side electrical connector (2).

11. Disconnect the electrical connector (1).

12. Remove the A-pillar side X500 electrical connector.

13. Clean or repair the terminals that only require attention. Refer to Connector Repairs in SI.

14. Remove the Air Inlet Grille Panel. Refer to Air Inlet Grille Panel Replacement in SI.
15. Locate the seams where the A-pillar merge to the plenum panel and inner fender as indicated in the graphic above.
16. Wipe the surfaces with Kent Acrysol, P20005, or equivalent, to remove any residual sealer or urethane.

17. Apply a liberal amount of Kent® Quick Seal MSP Seam Sealer or equivalent, to All the seams.

18. Apply a liberal amount of sealer to the seams at the A-pillar.

19. Water test area to ensure the leak has been fixed.
20. Repeat the process for the passenger side panels.
21. Install the Air Inlet Grille Panel. Refer to Air Inlet Grille Panel Replacement in SI.
22. Install the driver side door. Refer to Front Side Door Replacement in SI.
