MSD Thread Subject

DW2 issue : Driving lights installation (programming VCM3)

MSD Post Content

Good day MSD Community! Just a notice out for anyone trying to install the driving lights on the Challenger, DW2 does not work for doing this now, the teams are aware and working on repairing this. For the time being, you can use DW1 using the auxiliary controller programming and selecting VCM3. If you are doing this install on a MY22 you will still be able to connect to DW1 by selecting a MY21 challenger. Dw1 will read wrong vehicle selected, this is okay, you are still connected and can follow through with programming the VCM3. If there are any questions let me know! Thanks,
