
SSM 51104 2017-2019 F-Super Duty – Adaptive Steering – Steering Wheel Replacement

Some 2017-2019 F-Super Duty vehicles equipped with adaptive steering may require steering wheel replacement for various reasons. The steering wheel assembly contains the steering effort control module (SECM) and steering angle sensor module (SASM). Previous software versions of the Integrated Diagnostic Software (IDS) scan tool may not have programmed the SECM properly after replacement. Engineering has corrected the concern and SECM programming can now be successfully performed on these vehicles using the latest software level of IDS.
