

Batter-to-Battery Connector Cable

M-374-001

(March 2008)

Valid for

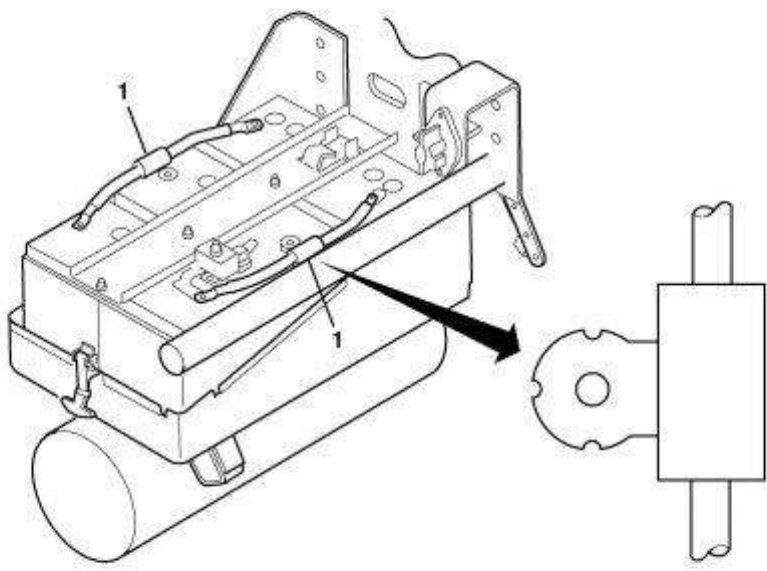

All CXU,CHU,GU,MRU,LEU with three battery arrangement.

Case description

A revised battery-to-battery connector cable (part number 21178749) for chassis equipped with a three-battery arrangement is available through the MACK Parts System. The revised cable, which connects the batteries of a three-battery arrangement together in parallel, does not have the rubberized plastic material moulded over the brass terminal ring on the center terminal. The absence of this material allows stacking of other cables on the battery terminals.

Note: Not applicable to Mack Trucks Australia.
