

Two-Piece Clutch Brake, Replacement

M-411-001

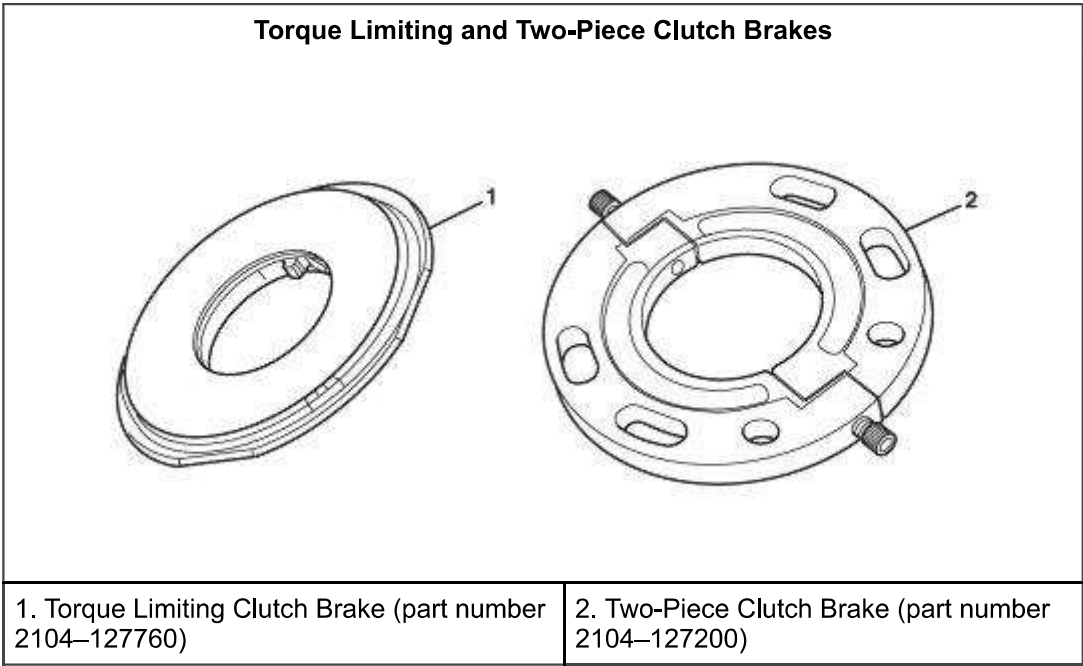

(December 2008)

Valid for

All CXU,CHU,GU models equipped with an air-assist clutch.

Case description

Should failure of a two-piece clutch brake assembly (part number 2104–127200) be experienced on a CXU, CHU or GU model chassis equipped with an air-assist clutch, it is recommended that the single-piece clutch brake assembly (part number 2104–127760) be used as the service replacement. Additionally, after replacing the clutch brake, always ensure that the clutch is properly adjusted according to the instructions outlined in service bulletin SB313005. Maintaining proper clutch adjustment will prolong the life of the clutch and clutch brake assembly, regardless of make or model of the clutch components.
