

Windshield Wiper Arm with Replaceable Washer Nozzle

M-363-001

(January 2008)

Valid for

Mack CXU,CHU,GU built before August 2007

Case description

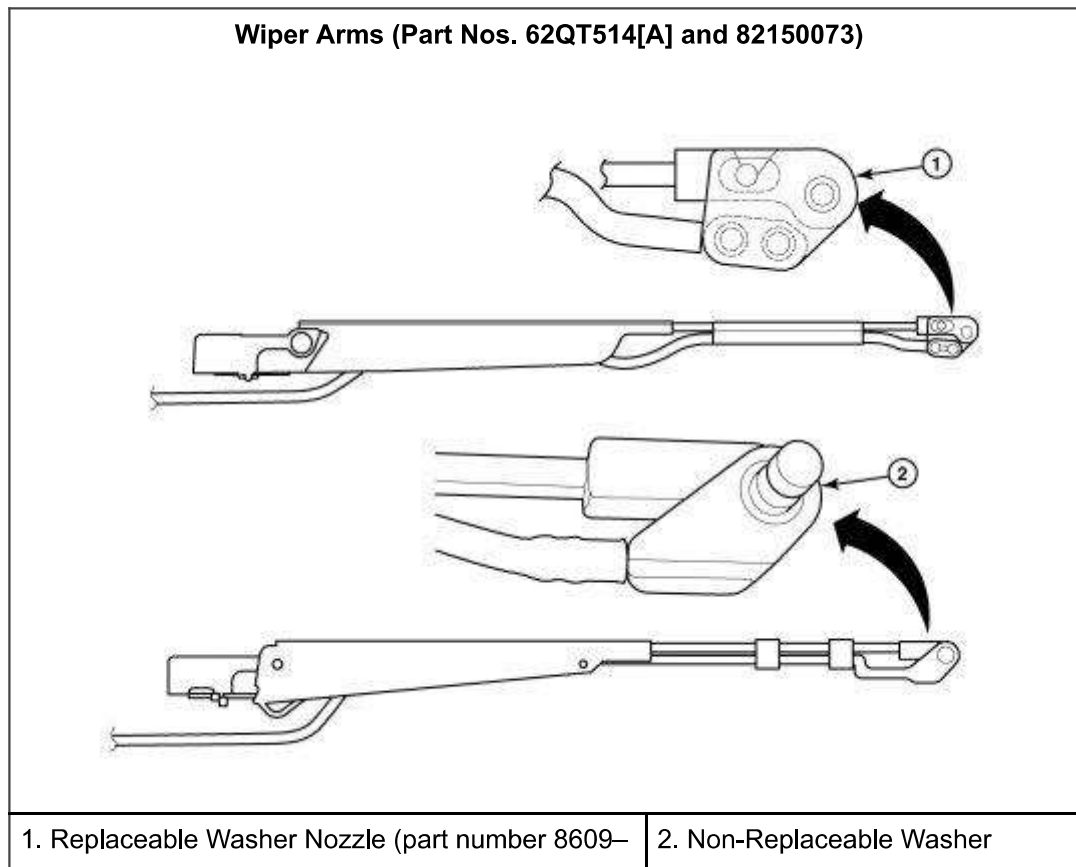

Beginning August 2003 through July 2007, windshield wiper arms with non-replaceable windshield washer nozzles were used in production on all conventional model chassis(CXU, CHU, GU, CXP, CXN, CX, CTP, CT, CHN, CH, CV and CL). Effective August 2007, a windshield wiper arm having a replaceable windshield washer nozzle was implemented into production.

Note: Not applicable to Mack Trucks Australia.

Repair

Replacement nozzles (part number 8609–80014221) are available through the MACK Parts System should replacement of existing nozzles be necessary. The replacement nozzle consists of a holder and two pre-aimed nozzles.

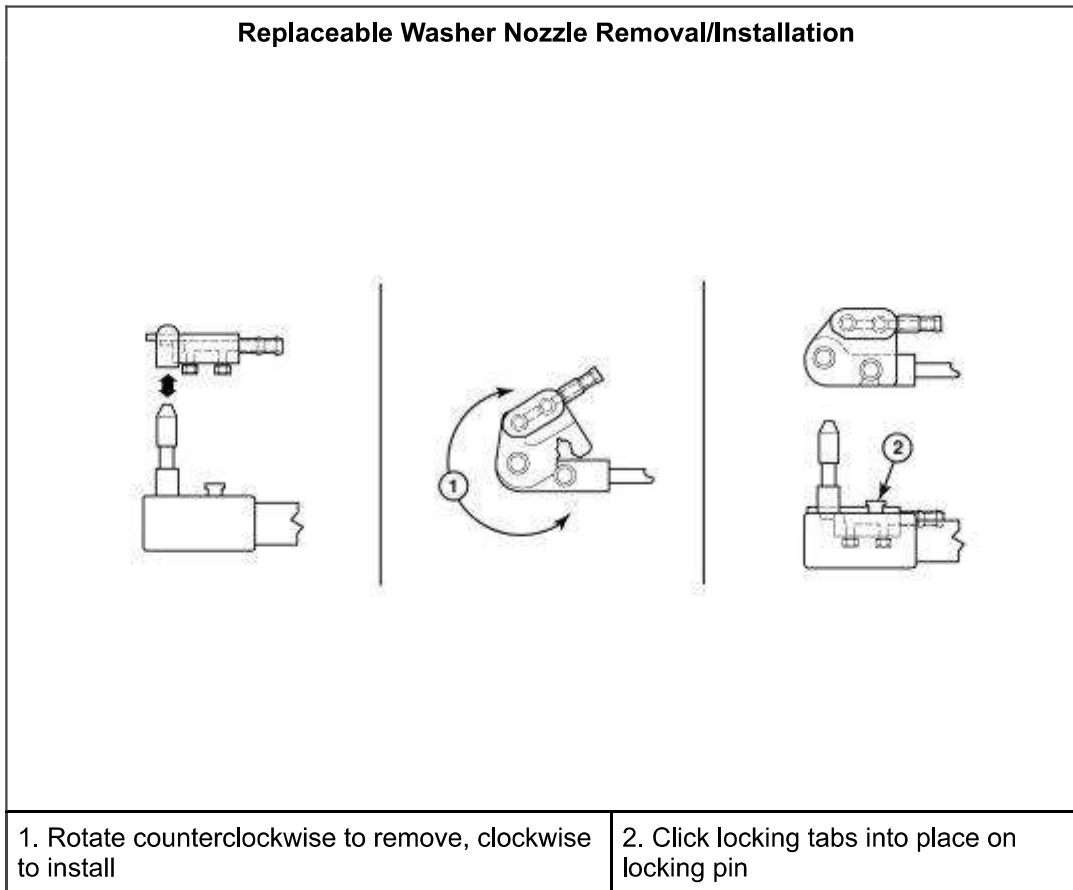

If a windshield washer nozzle assembly must be replaced, it is first necessary to determine which wiper arm is being serviced. Wiper arm part number 62QT514(A) utilizes non-replaceable washer nozzles. If this is the case, the wiper arm must be upgraded to wiper arm part number 82150073 which utilizes the replaceable washer nozzles. With this wiper arm, the nozzles can then be serviced at a later time if required.

80014221), used with wiper arm part number 82150073

Nozzle (wiper arm part number 62QT514[A])

To replace the washer nozzle:

1. Remove the wiper from the wiper arm assembly.
2. Disconnect the hose from the washer nozzle holder.
3. Rotate the nozzle holder assembly counterclockwise until the locking tabs are released from the locking pin.
4. Slide the washer nozzle holder off the wiper blade shaft.
5. Install the replacement nozzle assembly (part number 8609–80014221) using the reverse procedures of removal.
