Notes

▪ Repair instructions

Technical background

▪ **VERY IMPORTANT:** It is highly recommended the operative reads the instructions to familiarize themselves with the work required before proceeding

The operative should also be aware of the eAcademy training videos which can be found by the following the instructions below:

- Log on to GRP: <https://grp.volkswagenag.com/>
- Select "eAcademy"
- Select "Digital Learning HUB", then "Technical Information"
- Select "Bentayga 2020+"

Or

- Select "Digital Learning HUB", then "Search"
- Search "2068212/1" and the videos will be listed

Before conducting the onward procedure the operative MUST ensure the instructions within the attached document have been conducted regarding Bentley ODIS-S Brand version: 2.30.4 (Or higher) and also the setup of software flashing over DoIP (Diagnostics over Internet Protocol - DoIP)

CAUTION: In the event the software update is conducted WITHOUT the use of DoIP (Diagnostics over Internet Protocol), failure will occur which may result in the replacement of one or all four control units

DO NOT UNDER ANY CIRCUMSTANCES ATTEMPT TO CONDUCT THE SOFTWARE UPDATE VIA THE CAN NETWORK
ONLY DoIP SHOULD BE USED WHEN PERFORMING THIS UPDATE

NOTE: This WILL NOT be covered by a Warranty claim.

▪ **VERY IMPORTANT:** It is highly recommended the operative reads the instructions to familiarize themselves with the work required before starting the updates

Remedy

The following updates are required to ensure the applicable software is applied to the required control units

Section 1

USB or USB-C stick (see Genuine parts) update to Information control unit 1 - 005F (MIB3) using WT 10658

Section 2

Software updates are also required to the following control units

▪ **VERY IMPORTANT:** Once Section 1 has been conducted there are three individual SVM codes which MUST be applied in the exact order as detailed, a second USB stick update for the navigation database is also required once the SVM update for 005F is complete

The codes are detailed in the instructions and update the following control units

- 005F (MIB3 Information control unit 1) once the software update is complete to 005F **NOTE: A USBstick update using WT10637 is required once the software update is complete**
- 006C (top view camera)
- 0019 (Gateway) and 0075 (Emergency call module and communication unit - This is a combined SVM code)

Before conducting the onward procedure the operative MUST ensure the instructions within the attached document have been conducted regarding Bentley ODIS-S Brand version: 2.30.4 and also the setup of software flashing over DoIP (Diagnostics over Internet Protocol - DoIP)

CAUTION: In the event the software update is conducted WITHOUT the use of DoIP (Diagnostics over Internet Protocol), failure will occur which may result in the replacement of one or all four control units

DO NOT UNDER ANY CIRCUMSTANCES ATTEMPT TO CONDUCT THE SOFTWARE UPDATE VIA THE CAN NETWORK

ONLY DoIP SHOULD BE USED WHEN PERFORMING THIS UPDATE

NOTE: This WILL NOT be covered by a Warranty claim.

▪
IMPORTANT NOTE FOR HYBRID VEHICLES:

- Hybrid vehicles use a High voltage system and MUST only be worked on by suitably qualified personnel
- *Please ensure all guidelines within the repair manual are strictly followed before and whilst conducting any work on vehicles with a High voltage system*
- During the software update (Hybrid vehicles only) an audible humming noise (E sound) may be heard, please beware that this is an artificial sound activator to generate noise at low speeds, this is not a cause for concern in the event that the humming noise is evident

[Section 3](#)

- Calibration of the Overhead view camera

Customer notification

Customers of affected vehicles will be notified in writing by their Bentley retailer to arrange an appointment, make a note of the required action on the workshop order before it is signed by the customer

If it is omitted to perform the work required during a workshop visit, the customer should be notified immediately

You should also pass on this information to your new and used car sales departments so that affected vehicles are checked and repaired immediately

Warranty accounting instructions

Warranty type 710 or 790

Damage service number RC54

Damage code 00 99

Criterion ID 01

Time to conduct the Software Version Management (SVM) updates (x3 in total)

Labouroperationcode 01510000

Time

As per ODISlog Must not exceed 180 Time units, unless 005F (MIB3) was replaced as detailed in the Work section

Time to conduct the USB updates (x2 in total)

Labouroperationcode 91322520 (Use 99 index until 15/12/22)

Time 80 Time units

Time to calibrate the overhead view camera

Labouroperationcode 90831500

Time 40 Time units

▪

Time to replace 0005F (MIB 3) - Information control unit 1

This part IS NOT required to be replaced on all vehicles, this part should only have been replaced if an error occurs (outside of the expected errors described within this procedure), in this scenario permission must have been granted via a Technical DISS query prior to replacement

Where the error is either a pre-existing manufacturing defect or a failure induced by the correct software updating process, the unit must be claimed as part of the recall claim. 0005F units that have failed due to operator errors made during the software updating process may not be claimed from Bentley

Labouroperationcode 91961901

Time 10 Time units

Genuine parts

WT10637 - USB update stick for the 45/21 NAR map update

WT10658 - USB stick for the Infotainment software update

▪

IMPORTANT HINT: WT10658 can be supplied as follows:

USB-C format

Or

USB format

If supplied in USB format, a suitable USB to USB-C adapter must be used (Source locally), the connection between USB adapter and the vehicle must be secure before starting the update

▪

VERY IMPORTANT:

Information control unit 1 - 36A 035 050A - 005F (MIB3)

This part IS NOT required for all vehicles, this part should only be replaced if an error occurs (outside of the errors described) during the USB stick update, in this scenario permission must have been granted via a Technical DISS query prior to replacement as detailed within the Work section

NOTE TO PRODUCT SUPPORT

All DISS queries which are related to errors whilst conducting the USB update MUST be second levelled to Diagnostics

Parts supply

Not applicable

Parts despatch control

Not applicable

Questions and answers

What is the specific issue with the affected vehicles?

Due to a Software bug, upon selecting reverse gear, a blank-white screen could potentially be displayed instead of the required rear view camera image.

What repercussions does the fault have?

Should the rear view camera image not be displayed, the vehicles may not comply to Federal and Canadian safety standards.

Are any other Bentley models affected?

No, this affects a specific number of Bentley vehicles only. The affected vehicles have been identified using vehicle production records.

Is this all new Bentley vehicles produced so far?

No, this is only a very specific number of 3,345. The rest are unaffected.

Is this connected to any other recall?

Yes, Bentley is aware of the same concern affecting another vehicle manufacturer, who utilise the same infotainment system.

Have you seen any reports on Bentley vehicles? Did it result in an accident/injury?

Bentley is aware of a very limited number of occurrences. There have been no reported accidents or injuries associated with this issue.

What is the fix?

Bentley authorised retailers will update the infotainment unit software and associated control units software. This will take approximately three and a half hours dependant on specification of vehicle.

Can customers continue to drive the cars?

Yes, however, we encourage customers to arrange an appointment with their retailer as soon as possible. If while reversing, the rear view camera image appears as a blank-white image, we recommend that customers proceed with additional caution and contact their retailer immediately.

Do I have to make an appointment?

Yes, that's important. Customers need to contact their retailer immediately.

Which vehicles and how many are affected?

Specific Bentley models built between 10th July 2020 and 31st August 2022.

What about cars built since that date?

Cars not included on the recall campaign have been built with unaffected software.

Is this a global recall?

This affects all markets where the relevant legislation has been found to be applicable.

Why did you not take action sooner?

Once we identified the issue, we immediately investigated the impact on the affected vehicles, identified a technical solution, informed authorities as soon as possible and then prepared our own retailer network.

Why did you continue to sell cars even after you were notified of the problem?

All affected vehicles still under the Bentley factory's control were stopped, checked and rectified prior to being released. Vehicles that had already been produced and released from the factory will be rectified via the recall campaign.

How much will it cost to make the change?

There will be no charge to customers.

How much will it cost the business?

We would not disclose this type of information.

Repair instructions

■ Notes

Technical background

■

VERY IMPORTANT: It is highly recommended the operative reads the instructions to familiarize themselves with the work required before proceeding

The operative should also be aware of the eAcademy training videos which can be found by the following the instructions below:

- Log on to GRP: <https://grp.volkswagenag.com/>
- Select "eAcademy"
- Select "Digital Learning HUB", then "Technical Information"
- Select "Bentayga 2020+"

Or

- Select "Digital Learning HUB", then "Search"
- Search "2068212/1" and the videos will be listed

Before conducting the onward procedure the operative MUST ensure the instructions within the attached document have been conducted regarding Bentley ODIS-S Brand version: 2.30.4 (Or higher) and also the setup of software flashing over DoIP (Diagnostics over Internet Protocol - DoIP)

CAUTION: In the event the software update is conducted WITHOUT the use of DoIP (Diagnostics over Internet Protocol), failure will occur which may result in the replacement of one or all four control units

DO NOT UNDER ANY CIRCUMSTANCES ATTEMPT TO CONDUCT THE SOFTWARE UPDATE VIA THE CAN NETWORK

ONLY DoIP SHOULD BE USED WHEN PERFORMING THIS UPDATE

NOTE: This WILL NOT be covered by a Warranty claim.

▪

VERY IMPORTANT: It is highly recommended the operative reads the instructions to familiarize themselves with the work required before starting the updates

Check

If the vehicle is not already listed as repaired in "Repair history" (in Elsa pro), check for the presence of the paint completion mark (Figure 22)

If neither are evident please conduct the instructions within the Work section to completion

Genuine parts

WT10637 - USB update stick for the 45/21 NAR map update

WT10658 - USB stick for the Infotainment software update

▪

IMPORTANT HINT: WT10658 can be supplied as follows:

USB-C format

Or

USB format

If supplied in USB format, a suitable USB to USB-C adapter must be used (Source locally), the connection between USB adapter and the vehicle must be secure before starting the update

▪

VERY IMPORTANT:

Information control unit 1 - 36A 035 050A - 005F (MIB3)

This part **IS NOT** required for all vehicles, this part should only be replaced if an error occurs (outside of the errors described) during the USB stick update, in this scenario permission must have been granted via a Technical DISS query prior to replacement as detailed within the Work section

NOTE TO PRODUCT SUPPORT

All DISS queries which are related to errors whilst conducting the USB update MUST be second levelled to Diagnostics

Work

▪

Before conducting the update the operative MUST check for any related DTC's as these MUST be resolved before conducting the update

- Flight mode MUST be activated when conducting the updates

On completion flight mode MUST be deactivated

- The closed-circuit voltage of the vehicle must be at least 12.5 V during the update. Connect a suitable battery charger to the vehicle. For further information refer to the Repair manual
- During the update switch off all unnecessary consumers (ventilation, seat heater, interior illumination etc) ensure the main light switch is set to 'off' and leave the driver's door open
- Because of the highest transmission stability you MUST use the diagnosis interface VAS 6154 (WiFi diagnostic tool) ONLY in USB operation or the cable-connected VAS 5055 for the reprogramming (updating) of control units. If these units are not available, the diagnosis interface VAS 5054 (A) can also be used in USB mode
- Do Not under any circumstances use a Bluetooth connection to conduct the reprogramming (updating) of any control units

Section 1 - USB update

NOTE: During the updates the system may reboot several times

VERY IMPORTANT: The images within the Measure section may differ slightly as the images used are for guidance purposes only

- Flight mode MUST be activated when conducting the updates

On completion flight mode MUST be deactivated

1. Activate flight mode in the emergency call module

- Activate flight mode directly via "Self-diagnosis" in diagnostic address 0075 - Emergency call module and communication unit > Adaption > Basic functions connect > Basic functions connect > Flight mode >> Activate/deactivate

VERY IMPORTANT:

- Once flight mode is activated, read the identification data from the 005F control module
- Right click 005F Information Electronics 1 > Guided Functions > Read Identification Data

Note: only identification data from the main unit should be read, sub-system data can be ignored

- The data read is used to determine later repair procedures. Please take a note of the software version
- If the software version is 3376, proceed at the instructed point with step 6 of Section 2 - Software version management (SVM) to restore the navigation database using USB stick WT10637
- If the software version is 3399, step 6 can be ignored

2. Insert USB update stick (WT10658) into USB 1 socket (Figure 1)

WT10658 could be supplied as follows:

USB-C format

Or

USB format

If supplied in USB format, a suitable USB to USB-C adapter must be used, the connection between USB adapter and the vehicle must be secure before starting the update

VERY IMPORTANT: Do not under any circumstances remove the USB stick or turn off the ignition whilst the update is being performed

Figure 1

- Press the home screen button (Figure 2)

Figure 2

- Using two fingers, press and hold the MMI screen in the area's highlighted by the red circles (Figure 3) until the red engineering menu appears (Figure 4). select 'Update'.

Figure 3

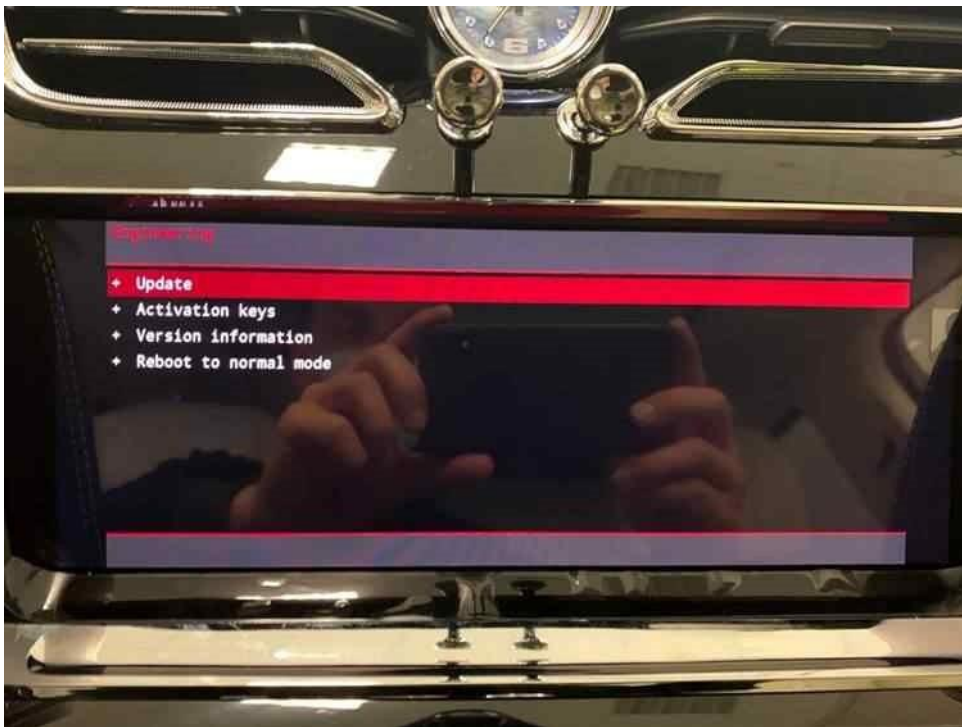

Figure 4

3. Select the suggested update. (Figure 5)

Figure 5

4. A summary of the proposed changes will then appear (Figure 6), scroll down and select 'Start update' (Figure 7)

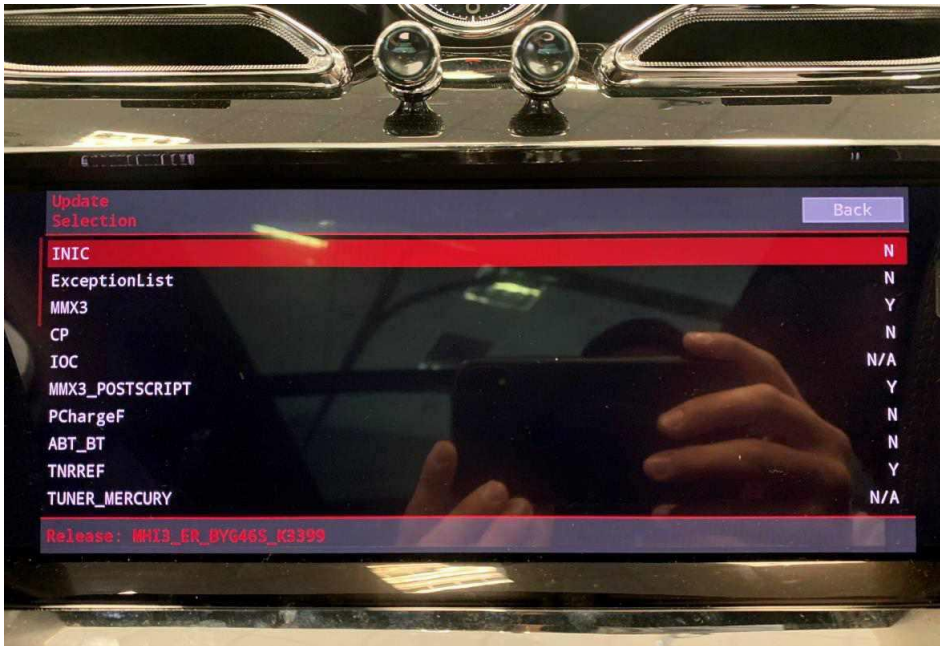

Figure 6

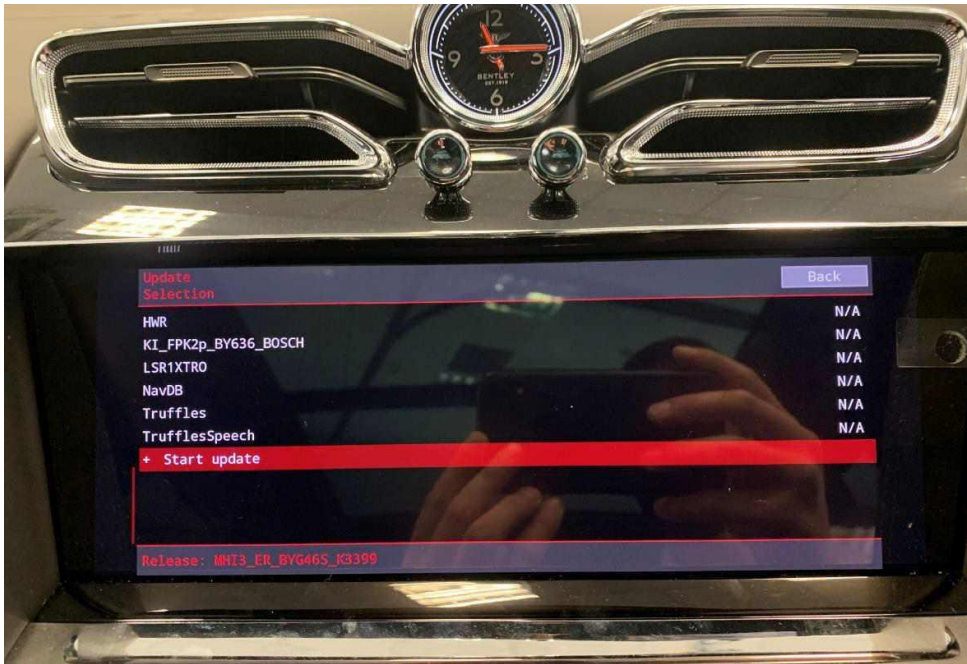

Figure 7

5. On the following screen

- Select 'Start update' again. (Figure 8)

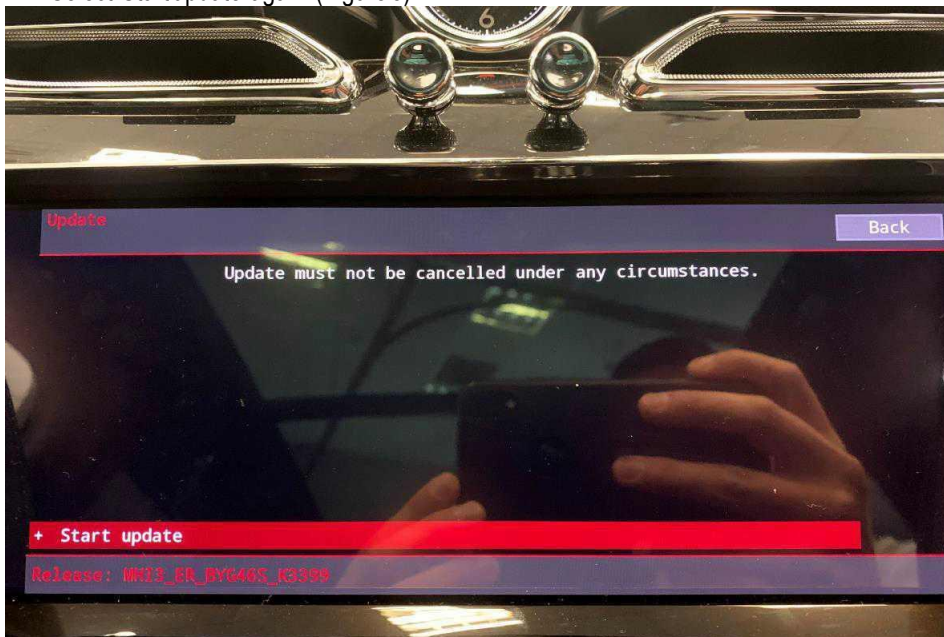

Figure 8

- **VERY IMPORTANT:** Do not under any circumstances remove the USB stick or turn off the ignition whilst the update is being performed

6. The software update will then begin (Figure 9)

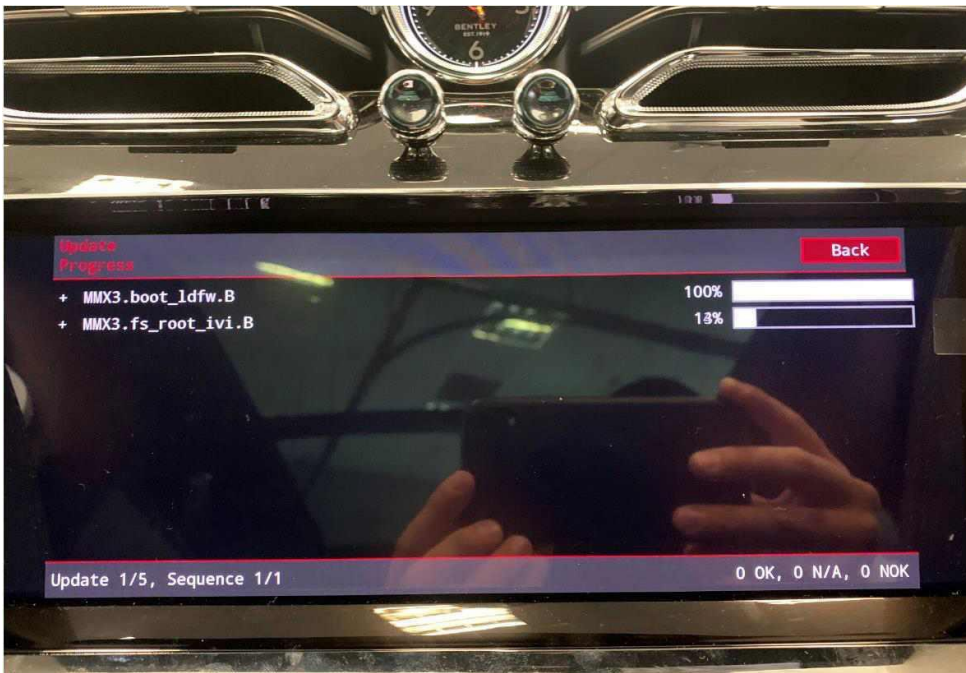

Figure 9

7. Once the update is complete a summary screen will be displayed. (Figure 10) Scroll down and press 'Resume' (Figure 11)

Figure 10

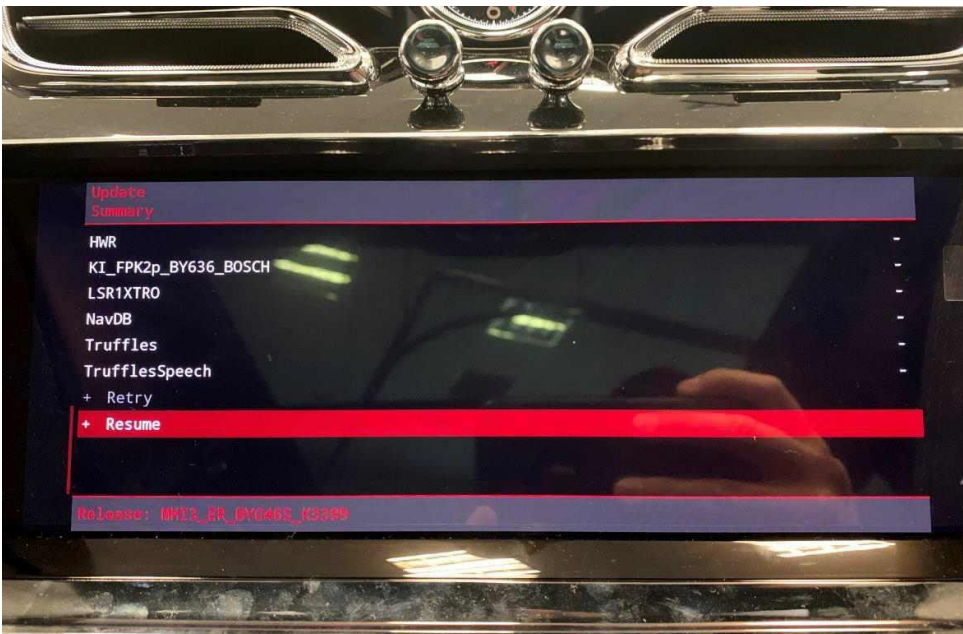

Figure 11

8. On the next screen select 'Quit' (Figure 12), the system will then reboot. Once the home screen is displayed, remove the USB update stick and carry out an ignition cycle.

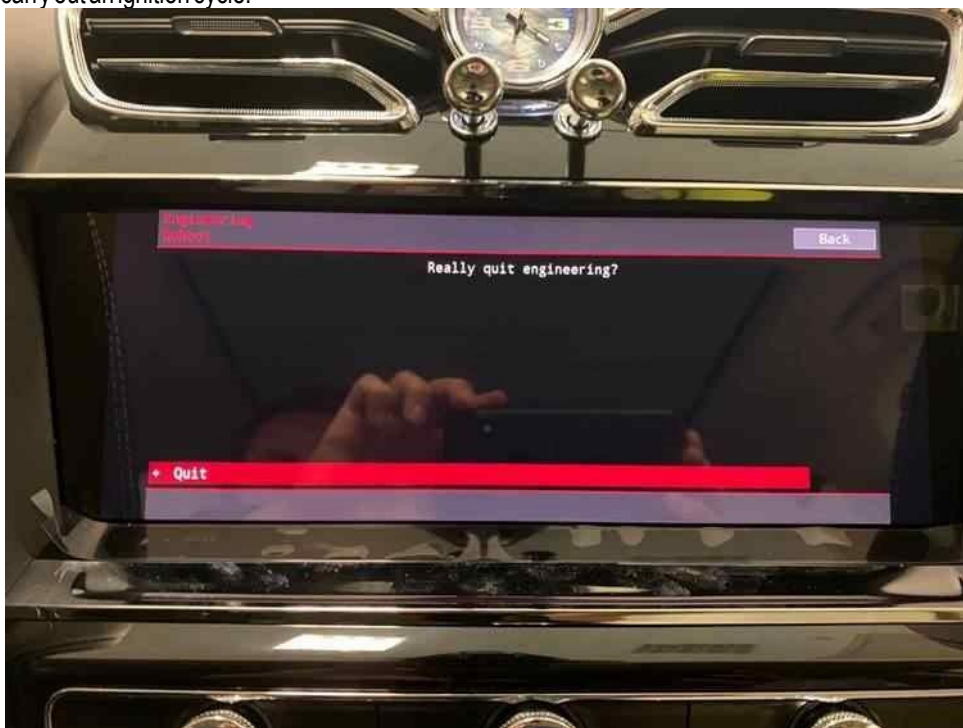

Figure 12

9. On completion carry out the following Software Version Management instructions (Section 2 - Software Version Management (SVM))

Section 2 - Software Version Management (SVM)

The software updates MUST be conducted in the exact order as detailed to update the following control units

- 005F (MIB3)
- 006C (top view camera)
- 0075 (Emergency call module and communication unit) and 0019 (Gateway)
-

VERY IMPORTANT:

Before conducting the onward procedure the operative **MUST** ensure the instructions within the attached document have been conducted regarding Bentley ODIS-S Brand version: 2.30.4 (Or above) and also the setup of software flashing over DoIP (Diagnostics over Internet Protocol - DoIP)

CAUTION: In the event the following software update is conducted **WITHOUT** the use of DoIP (Diagnostics over Internet Protocol), failure will occur which may result in the replacement of one or all four control units

NOTE: This **WILL NOT** be covered by a Warranty claim.

DO NOT UNDER ANY CIRCUMSTANCES ATTEMPT TO CONDUCT THE SOFTWARE UPDATE VIA THE CAN NETWORK

ONLY DoIP SHOULD BE USED WHEN PERFORMING THIS UPDATE

[005F \(MIB3\) update](#)

VERY IMPORTANT: Before conducting the onward instructions/entering the SVM code, the operative **MUST** recheck the DoIP set up in ODIS and ensure that DoIP is selected (Figure 13) If it is not, please refer back to the attached instructions before proceeding

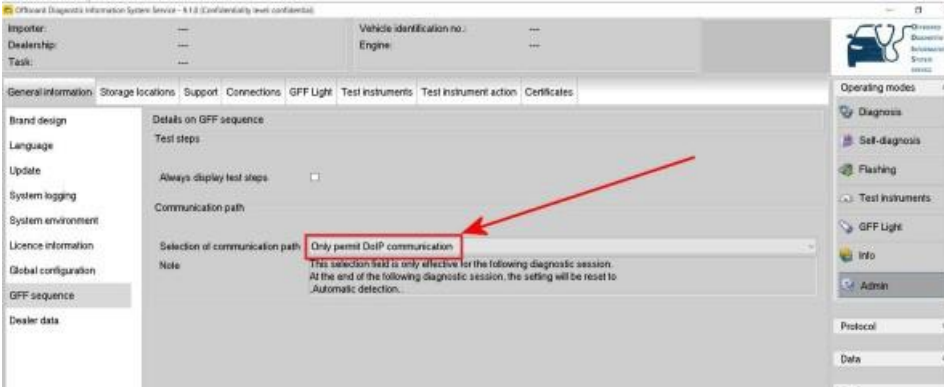

Figure 13

Referring to Figure 14 - A further DoIP connection check can be confirmed by checking the OBD dongle, when DoIP is connected When in DoIP mode, a red light on the INFO LED will be visible

Figure 14

If all pre requisites have been conducted and DoIP is connected, continue with the onward instructions

1. Select and run Guided fault finding

• Referring to Figure 15 - Within the Special functions tab select SVM – Code Input (A) then select Perform test (B)

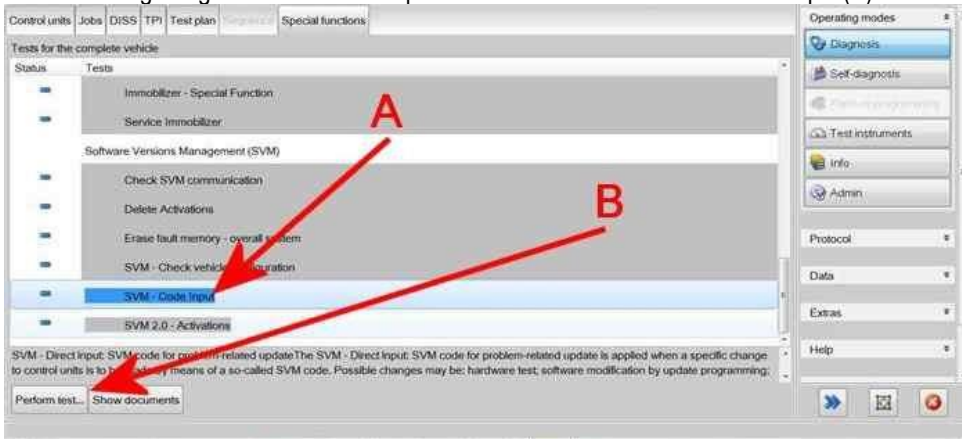

Figure 15

2. On the next screen enter the SVM code 4V0CLUST37 and select Adopt (Figure 16)

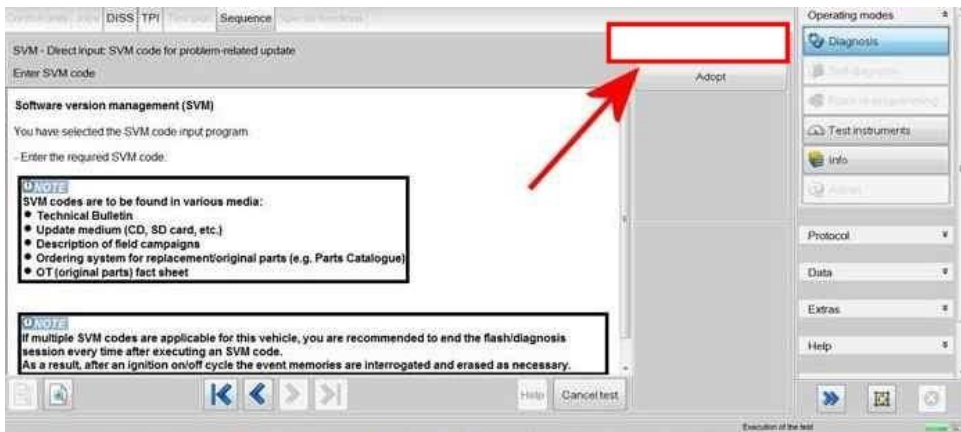

Figure 16

3. On the following screen, confirm the code - Then select Yes

- All control modules will be interrogated
- The SVM action will then take place (Figure 17)

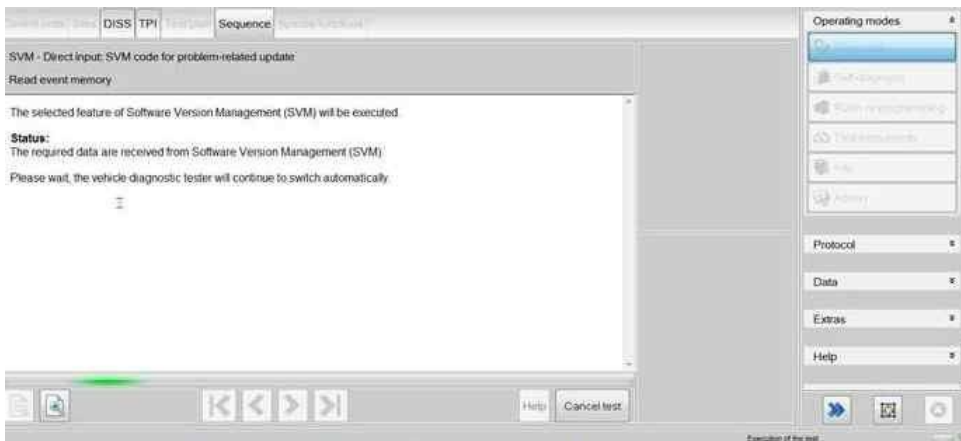

Figure 17

4. Once complete a summary screen will appear (Figure 18), this confirms successful completion - Follow any on screen prompts until program end

Figure 18

5. Switch off the ignition

- Remove the diagnostic interface from the OBD port
- Switch off and remove the battery charger from the vehicle
- Close the bonnet, boot and all doors
- Lock the vehicle

- Wait 5 minutes to allow the vehicle to go into bus silence
- When 5 minutes has elapsed, unlock the vehicle and open the driver's door
- Switch on the ignition
- **VERY IMPORTANT: Ensure step 6 below is now followed regarding navigation database update**

6. Upon successful completion of applying the 4V0CLUST37 SVM code, reload the latest navigation database using USB stick WT10637 (Figure 19) - Repeat the USB stick update process detailed in Section 1 using WT10637

VERY IMPORTANT: In the event that software version 3399 was identified in 005F control module during step 1 of this procedure, reloading of the navigation database can be ignored

Figure 19

VERY IMPORTANT:

In the event that Error 133 (Figure 20) or any other Errors (outside of the Errors described within the Work section) are visible during the navigation database update (Step 6)

The operative **MUST** raise a Technical DISS query ensuring a screenshot of the Error is attached to the query, once permission has been granted via DISS - refer to Rep.Gr 91 and replace the Information control unit 1 - 005F (MIB3)

NOTE TO PRODUCT SUPPORT

All DISS queries which are related to errors whilst conducting the USB update MUST be second levelled to Diagnostics

Should any other issues be evident or further clarification is required please raise a Technical DISS query and await feedback before conducting any further work

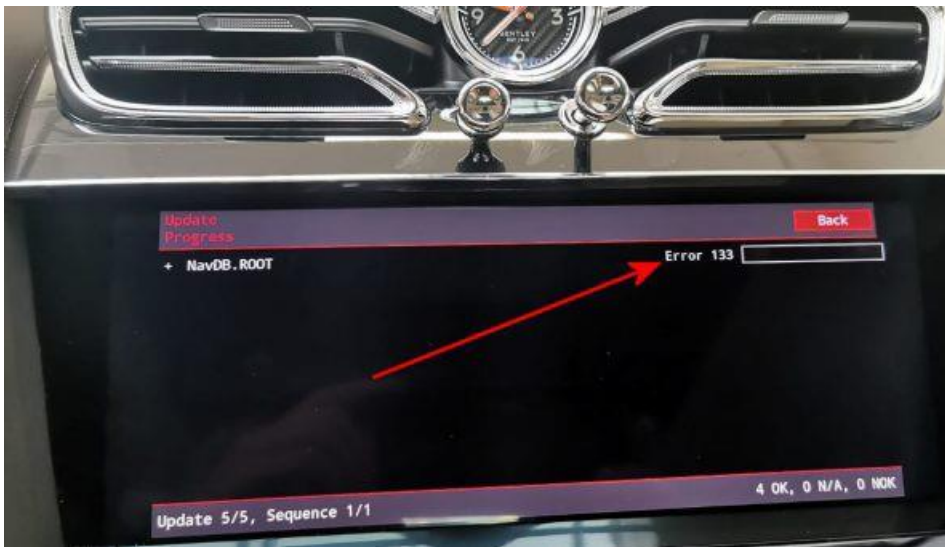

Figure 20

[006C \(Top view camera\)](#)

7. Select and run Guided fault finding.

- Referring to Figure 15 - Within the Special functions tab select SVM – Code Input (A) then select Perform test (B)

8. On the next screen enter the SVM code 4V0CAMUP01 and select Adopt (Figure 16)

9. On the following screen, confirm the code - Then select Yes.

- All control modules will be interrogated
- The SVM action will then take place (Figure 17)

10. Once complete a summary screen will appear (Figure 18), this confirms successful completion. Follow any on screen prompts until program end

11. Switch off the ignition

- Remove the diagnostic interface from the OBD port
- Switch off and remove the battery charger from the vehicle
- Close the bonnet, boot and all doors
- Lock the vehicle
- Wait 5 minutes to allow the vehicle to go into bus silence
- When 5 minutes has elapsed, unlock the vehicle and open the driver's door
- Switch on the ignition

VERY IMPORTANT: Lower the rear blinds before conducting the next part of the procedure 0075 (Emergency call module and communication unit) and 0019 (Gateway) as the windows are expected to drop slightly during this part of the procedure After carrying out any of the SVM update and carrying out a CAN sleep the diagnostic tester may lose connection to the vehicle. A restart of ODIS is required, please also be aware that before continuing the operative MUST ensure that DoIP is enabled before continuing

VERY IMPORTANT: Save a diagnostic log and check DoIP is selected as the communication path - Refer to the combined update attachment

[0075 \(Emergency call module and communication unit\) and 0019 \(Gateway\)](#)

VERY IMPORTANT: Please be aware that the progress of the update to the Emergency call module and communication unit can appear to be slow in updating, this is expected DO NOT under any circumstances attempt to refresh or restart the update, the operative MUST wait and follow all applicable on screen prompts

12. Select and run Guided fault finding

VERY IMPORTANT: Ensure the rear windows are both fully lowered before proceeding

- Referring to Figure 15 - Within the Special functions tab select SVM – Code Input (A) then select Perform test (B)

13. On the next screen enter the applicable SVM code depending on the Model Year

VERY IMPORTANT: The SVM codes are Model Year specific. Entering the wrong code will cause the test to fail

21 Model Year

- 4V0CL37ECU21MY

22 Model Year

- 4V0CL37ECU01
- Once the correct code has been entered - Select Adopt (Figure 16)

14. On the following screen, confirm the code - Then select Yes.

- All control modules will be interrogated
- Both SVM actions for the Emergency call module and communication unit and Gateway will then take place (Figure 17)

VERY IMPORTANT: The ignition cycle between the gateway and Emergency call module and communication unit is automatic (no intervention is required) other than those given via the on screen prompts

The ignition may switch off before the message on the screen

CAUTION: During the update of the Emergency call module and communication unit, the screen shown in Figure 21 may be evident, in this scenario it is imperative that the instructions on the screen are strictly followed - Select Finished/Next and follow all remaining on screen prompts

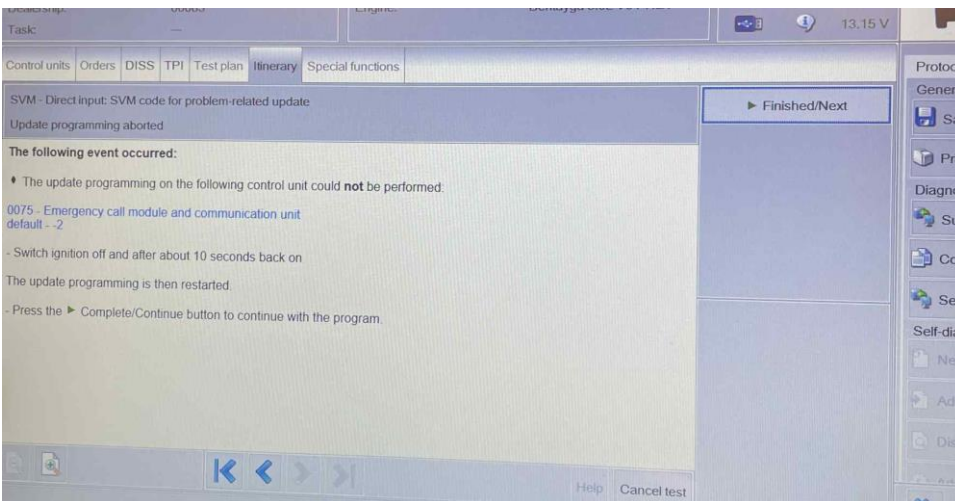

Figure 21

15. Once complete a summary screen will appear (refer back to Figure 18), this confirms successful completion - Follow all on screen prompts until program end

16. Switch off the ignition

- Remove the diagnostic interface from the OBD port
- Close the bonnet, boot and all doors

- Lock the vehicle
- Wait 10 minutes to allow the vehicle to go into bus silence
- When 10 minutes has elapsed, unlock the vehicle and open the driver's door
- Switch on the ignition

17. In the event that DTC B201A00 Check Software Version Management (SVM) is stored in 005F please run any tests to completion which are associated with the DTC

18. On completion flight mode MUST be deactivated

- Deactivate flight mode in diagnostic address 0075 Emergency call module and communication unit
- Deactivate flight mode via "Self-diagnosis" in diagnostic address 0075
- Flight mode >> Deactivate

On completion of the software updates the control unit information will be as shown in the table below

Control unit	Part number	Software version
005F	36A.035.050.A	3809
0019	80C.907.468.G	0623
0075 (US & Puerto Rico)	4KE.035.283.D	0450
0075 (Canada)	4K2.035.284.D	0450
006C	ZDC update only	Not applicable

19. Ensure the vehicle's Wi-Fi is set within the infotainment as follows:

- Using ODIS navigate to special functions
- Run test 0027 - Activate TSR Wi-Fi

20. Referring to Rep.Gr94 - Calibrate the Overhead view camera

VERY IMPORTANT: Please beware that there may be no DTC's evident within 006C however the calibration of the overhead camera **MUST** be conducted to completion regardless if DTC's are present or not within 006C

21. Apply a yellow paint completion mark to the floor panel (adjacent to the right of the 12 volt battery) as shown in Figure 22

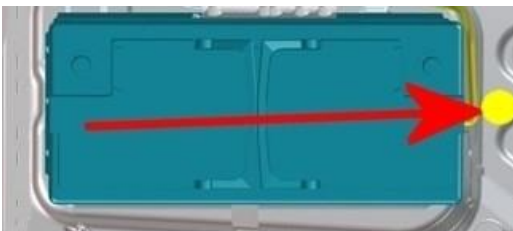

Figure 22

Identification

Yellow paint completion mark to the floor panel (adjacent to the right of the 12 volt battery) as shown in Figure 22

BENTLEY

Using DoIP on a ODIS Tester

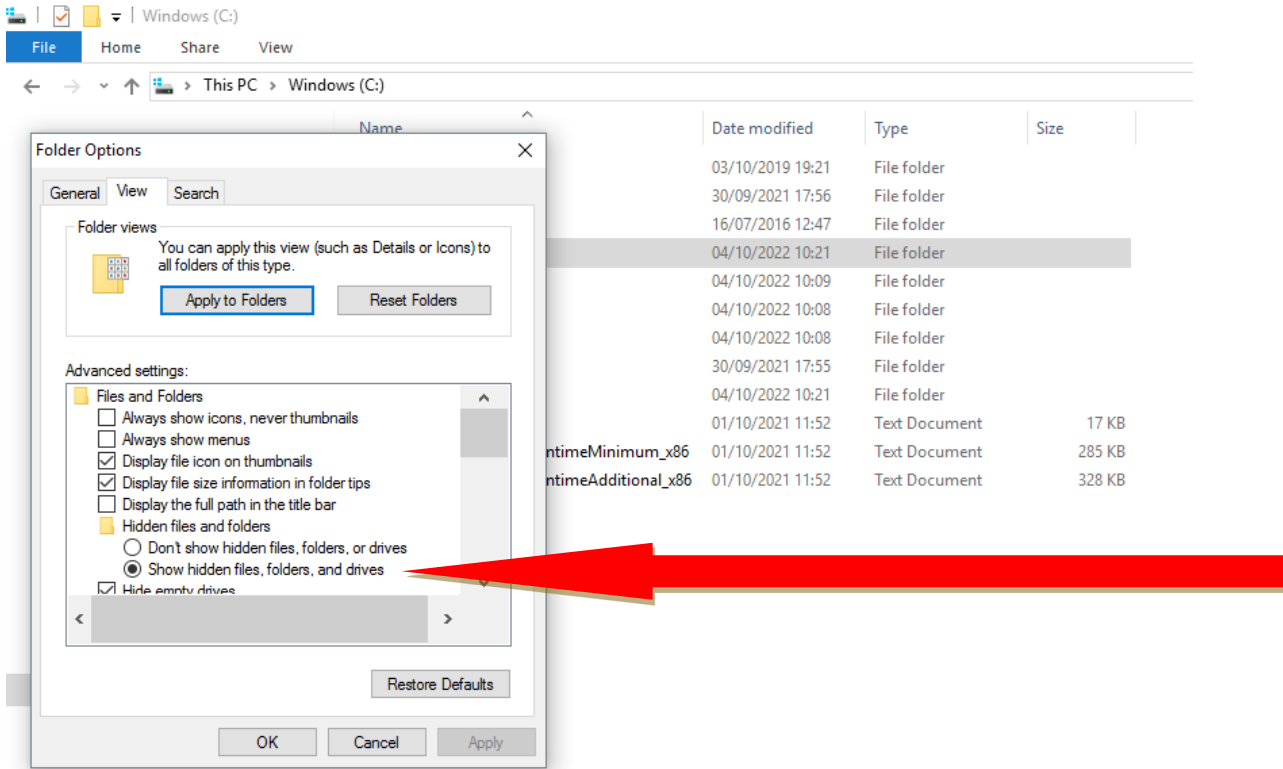

Set-up of Program Configuration—One time set-up once new ODIS Version Updated

Access the Program Data for ODIS-S on your Windows(C:) drive

1) Please be aware that in some cases the “ProgramData” folder may need to be unhidden.

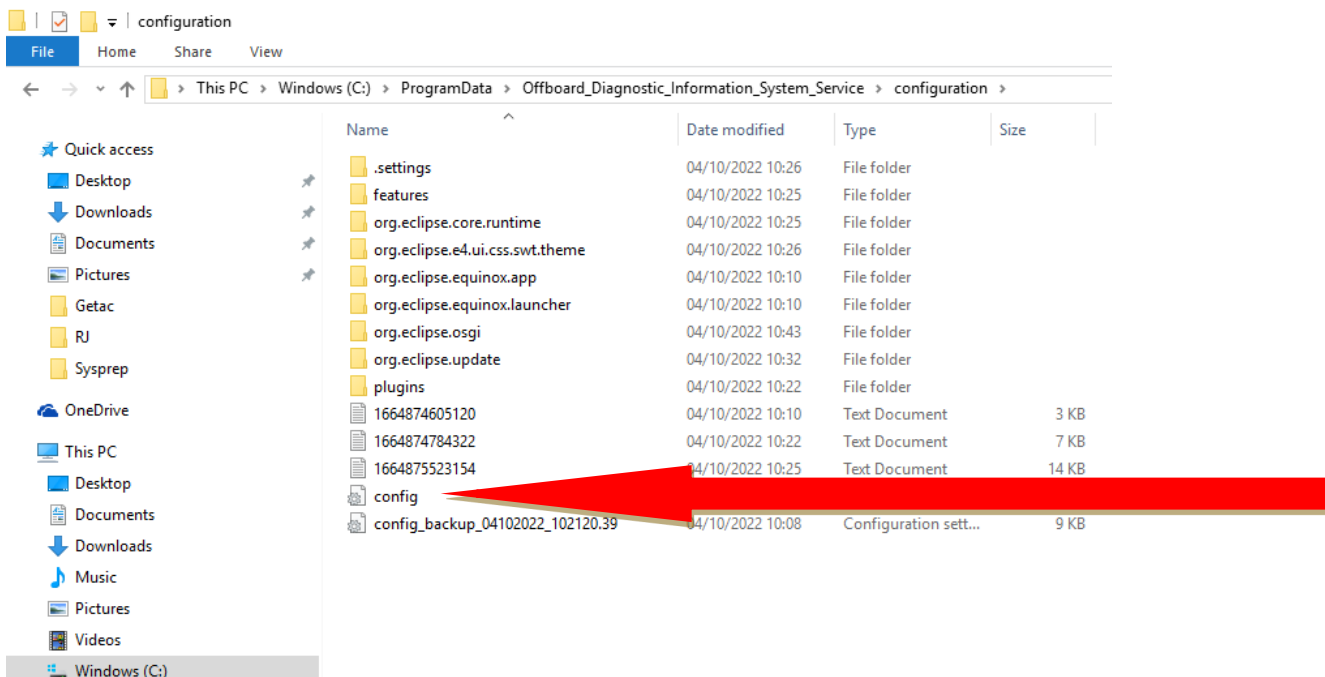

Navigate through: File > Folder Options > View > Show Hidden Files, folders and drives

2) Navigate through the folders below:

ProgramData > Offboard_Diagnostic_Information_Systemem_Service> configuration

3) Select the config file (this may be marked as config.ini)

3) The IPv6 activation value will be set as false by default

```
config.ini - Notepad
File Edit Format View Help
# Allow dynamic extension registration. Required for dynamic brand theme definitions.
eclipse.registry.nulltoken=true

# Indicates if the online protocol has to be sent translated or not.
# Allowed values are 'true' and 'false'. The default value if 'false'
de.volkswagen.odis.vaudas.diagprot.online.protocol.translation=false

# Setting to activate the IPv4-Communication via DoIP
#
# The default value is 'true'
# de.volkswagen.odis.vaudas.diag.doip.ipv4-active=true

# Setting to activate the IPv6-Communication via DoIP
#
# The default value is 'false'
# de.volkswagen.odis.vaudas.diag.doip.ipv6-active=false
```

4) This needs to be changed to true so that the line reads:

de.volkswagen.odis.vaudas.diag.doip.ipv6-active=true

Then save and exit folder.

```
config.ini - Notepad
File Edit Format View Help
# Allow dynamic extension registration. Required for dynamic brand theme definitions.
eclipse.registry.nulltoken=true

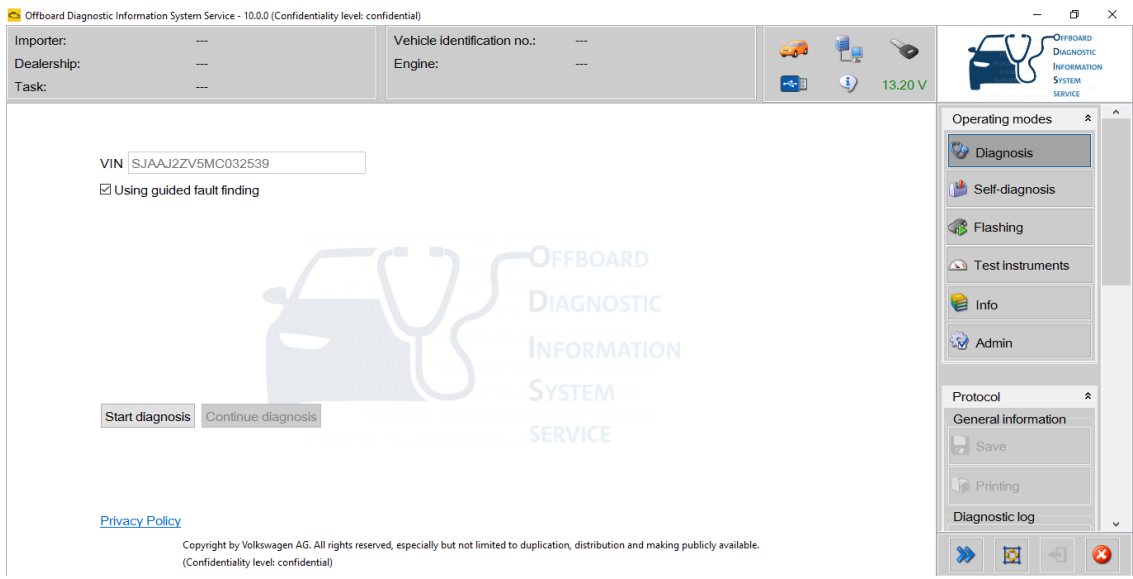

# Indicates if the online protocol has to be sent translated or not.
# Allowed values are 'true' and 'false'. The default value if 'false'
de.volkswagen.odis.vaudas.diagprot.online.protocol.translation=false

# Setting to activate the IPv4-Communication via DoIP
#
# The default value is 'true'
# de.volkswagen.odis.vaudas.diag.doip.ipv4-active=true

# Setting to activate the IPv6-Communication via DoIP
#
# The default value is 'false'
# de.volkswagen.odis.vaudas.diag.doip.ipv6-active=true
```

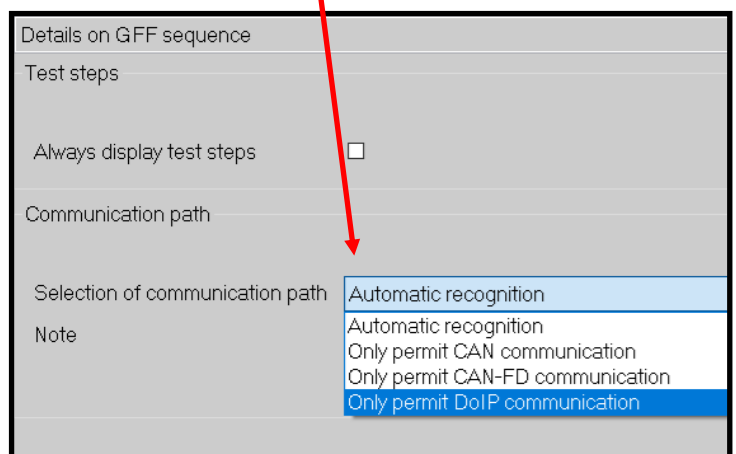

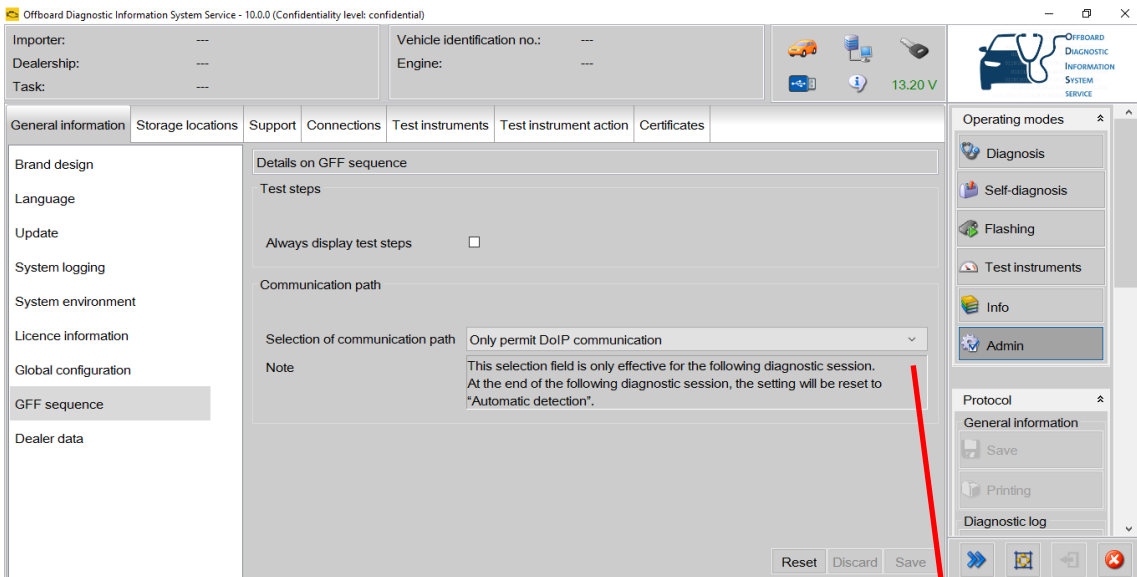

DoIP Selection Each Time a New ODIS Session is Started

1) Load the ODIS program

2) Select the Admin tab then the GFF Sequence tab. Here, there is an option to select the preferred Communication path.

Use the drop down menu on the Selection of communication path to only permit DoIP communication

NOTE: every time a new diagnostic session is started from this point, steps 1 and 2 will need to be repeated

It is highly recommended that you double check that the DoIP communication protocol is used prior to beginning flashing of complex ECU's (Conbox and Gateway)

In order to do this, save or send a Diagnostic log via the "Protocol" tab. Access the saved or sent diagnostic log and check that "DoIP" is shown as the communication path. If CAN/K-Line is shown, please return to steps 1 and 2 of page 4 of this document and check again.
