

## TITLE: ARAS RADAR ALIGNMENT TOOL

MODEL: 2022 NINJA H2® SX SE

## SERVICE INFORMATION

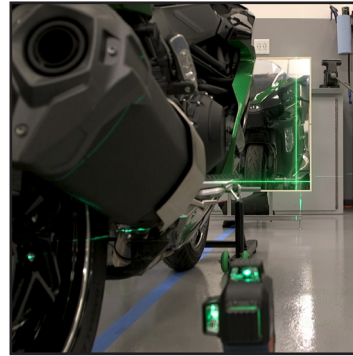

### SUBJECT

The 2022 Kawasaki Ninja H2® SX SE is equipped with the Advanced Rider Assist System (ARAS) that utilizes radar at the front and rear of the vehicle to support advanced functions such as Adaptive Cruise Control, Forward Collision and Blind Spot Detection. A warning indicator on the multi-function meter alerts the operator if any of these systems malfunctions or may need adjustment. It is also potentially necessary to adjust the radar if vehicle service requires removing the radar units, such as when removing the front or rear cowl or other bodywork.

## ARAS RADAR ALIGNMENT TOOL KIT

In order to properly adjust ARAS requires the use of Kawasaki's ARAS Radar Alignment Tool Set and KVCS. This Kawasaki special tool consists of a multi-direction laser level, front reflector and stand, front wheel stand, rear wheel reflector and white boards.

## K-TECH QUICK TIPS VIDEO

There is a K-Tech Quick Tips Video, [ARAS Radar Alignment Procedure](#), in the SERVICE section of K-Dealer that outlines the proper set-up and use of the tool.

## DEALER ACTION

If you encounter an ARAS warning indicator or are performing service that requires bodywork removal, contact Kawasaki Dealer Care at (800) 854-3800 for instructions on obtaining the ARAS Radar Alignment Tool Set.
