Bulletin No.: PIP5897
Published date: 01/10/2023

Preliminary Information

PIP5897 DIC Message - Reduced Acceleration Drive With Care Without MIL

Models

Brand:	Model:	Model Years:	VIN:		Engine:	Transmissions:
			from	to		
Cadillac	Lyriq	2023 - 2023	All	All	EN0	All

Involved Region or Country	North America
Condition	Some customers may observe a pop-up message in the Driver Information Center (DIC) when starting the vehicle which states, “Reduced Acceleration, Drive with Care.” This condition has been observed in colder ambient temperatures and is not accompanied by a Malfunction Indicator Lamp (MIL). When the vehicle displays this message, full acceleration may be available if no other factors are present which would typically limit the battery output power, such as a very low state of charge or extremely cold temperatures.
Cause	While this DIC message is intended to be displayed to the customer for a variety of reasons and conditions, a software anomaly has been identified in the BECM module which incorrectly requests this message at key up in the cold.

Correction:

The software update to correct this anomaly will be sent over-the-air (OTA) in an upcoming release in early 2023 calendar year.

Customers are encouraged to accept all OTA software updates as they become available.
