Compressed Natural Gas (CNG) Fuel Specifications

STC.0011 Ver. 1.0 January 9, 2023

Fuel quality is crucial to maintaining engine performance characteristics, life expectancy, and emission standards. Compressed natural gas (CNG) fuel used in Hexagon® Agility® fuel systems must meet or exceed the minimum requirements of SAE International J1616 “Recommended Practice for Compressed Natural Gas Vehicle Fuel.”

In addition, CNG fuel dispensing equipment requires regular maintenance to prevent fuel system contamination from excess oil blowby, moisture, and other impurities.

NOTICE **Failure to meet fuel requirements may result in poor engine performance and damage not covered under warranty.**
