Model(s)	Year	Eng. Code	Trans. Code	VIN Range From	VIN Range To	
Atlas, Atlas Cross Sport	2022	2.0T DTFA	All	CA_NC000001	CA_NC999999	

Revision Table							
Instance Number	Published Date	Version Number	Reason For Update				
2069659/1	03/7/2023	01-23-03	Original publication.				

#### Note:

If software updates or flash campaign/actions are performed on a vehicle, a charger with at least 70A charging current MUST be used in order to avoid problems during software updates and flash campaign/actions.

One or more of the following fault codes may be stored in the Engine Control Module (ECM) Fault Memory:

DTC	Description
P2407	Evaporative Emission System Leak Detection Pump Sense Circuit Intermittent/Erratic
P0442	EVAP Emission Contr.Sys.(Small Leak) Leak Detected

#### Note:

**DO NOT** diagnose or replace components due to the above faults **before** performing the update function as explained in this bulletin.

#### **Technical Service Bulletin**

01-23-03 - Update Programming, DTC P2407 Stored in Engine/Motor Release date: 3/7/2023

**Transaction No:** 

2069659/1

Control Module -J623-

# **Technical Background**

Current engine software may allow erroneous faults to be stored in ECM memory.

#### Note:

Current engine software may incorrectly store a P0442 DTC instead of a P2450 DTC due to the calibration of the diagnostic.

# **Production Solution**

Introduced improved engine software in production.

## **Service**

## **Update-Programming Procedure:**

<u>Critical Warning</u>: The Midtronics battery charger <u>must</u> be connected to the vehicle battery for the duration of the programming, to ensure the battery state of charge remains above 12.5 volts during the update process. If the battery drops below 12.5 volts, the programming could fail which may result in damage to the control module. Control modules damaged by inadequate voltage will not be covered under the warranty policy. The technician should verify the vehicle voltage prior to starting the update process, and should monitor the voltage for the duration of the update.

The procedure may cancel itself if the hazard warning lights are not switched ON. The hazard warning lights prevent the system from switching to bus sleep mode during the update.

ODIS-Service tester should be updated to the latest GFF technical version 11.0.0 or higher and SW version 2.47.0 or higher.

# **WARNING:**

Radiator Fan(s) may cycle ON high speed during the Update Process! There is a risk that personal injury may result if contact is made with spinning fan blades.

Keep hands and all objects away from Radiator Fan(s) during Update Process!

#### **Technical Service Bulletin**

01-23-03 - Update Programming, DTC P2407 Stored in Engine/Motor 3/7/2023 Release date: Control Module -J623-

**Transaction No:** 

2069659/1

Prior to launching the ODIS Service diagnostic applications and starting control module update process, confirm tester screen saver and power settings in accordance with Diagnostic Device Hardware & Windows® - VHW-20-02 Change Power Options After Windows®10 Upgrade. Failure to do so may result in the tester entering power save mode during data transfer, and subsequent control module failure. When using a VAS 6150/X or 6160/X tester in conjunction with a VAS 6154 wireless transmitter head for a flash procedure, connect a USB cable between the transmitter head and the tester. Failure to do so may lead to errors during the flash procedure.

VAS tools must only be used with their power adapters plugged in. Under no circumstances should they be used on battery power alone during the programming procedure.

To Update-Programming using Software Version Management (SVM), review and follow instructions in Technical Bulletin Instance 2014603 "Software Version Management".

The SVM process must be completed in its entirety so the database receives the update confirmation response. A warranty claim may not be reimbursed if there is no confirmation response to support the claim or action is carried out that is not explicitly stated in the Technical Bulletin.

Update the Engine Control Module using the SVM Unit code as listed in the table below:

Model	Engine	Old Software Part No.	Old Software Version	New Software Part No.	New Software Version (or higher)	SVM Unit Code
Atlas, Atlas Cross Sport	2.0T (DTFA)	3CN.906.259.G	0002	3CN.906.259.G	0003	4B22

The procedure can be found in GFF under Functions/ Component Selection, Software Version Management, Adapting Software.

The procedure can be found in GFF under Functions/ Component Selection, Software Version Management, Adapting Software.

Ensure attached ECM/TCM Tuning Form has been completed and signed by customer as required in SVM Technical Bulletin Instance 2014603.
