HOW TO REPLACE FRONT BIG STRUT FOR TOFINO POP UP TENT

1. PICTURE 2 ---You'll need to use a 2x4 wood to support the weight of the roof when replacing the FRONT DRIVER SIDE BIG STRUT. Place this behind cap under side of roof. Someone needs to hold the 2x4 wood so that it doesn't move when replacing the strut.

2. PICTURE 1---Using a ratchet strap, hook strap on top and bottom ends of PASSENGER SIDE front strut. This is to keep the PASSENGER FRONT BIG STRUT from extending fully. Also if ratcheting down front struts, keep them equal as possible and never release the ratchet till hinges are bolted and secure. (see picture 1 below) Then pull the pins to remove FRONT DRIVER BIG STRUT (picture 2)

3. The big strut that you are replacing will also have to be strap using ratchet strap on the top and bottom ends of it so you are able to compress the strut and install it.
