SUBJECT: TFT DISPLAY SIZE WHEN VARIANT CODING CLUSTER

This Pitstop provides information to determine the correct instrument cluster when performing the cluster variant coding. There are two (2) cluster options in the KDS for variant coding (4.2-inch and 12.3-inch which are both encased in a curved panoramic display). The correct cluster must be selected for the variant coding to successfully complete. If the incorrect cluster is chosen, the next screen to input the vehicles mileage will not populate and variant coding cannot be completed.

Full Segment (Conventional Cluster 4.2-inch)

Dual Panoramic Curved Integrated Display (Full LCD Cluster 12.3-inch)
