TECHNICAL SERVICE BULLETIN				
SERVICE ACTION: INVERTER COOLANT/DEBRIS				
FLUSHING/REPLACEMENT FOR CLUSTER MESSAGE				
"REFILL INVERTER COOLANT" (SA515)				

This bulletin has been revised to include additional information. New/revised sections of this bulletin are indicated by a black bar in the margin area.

This bulletin provides information to flush out the inverter low-conductivity coolant (BSC-1) on certain 2021-2022MY Sorento HEV (MQ4 HEV) vehicles produced from September 2, 2020 through September 29, 2021 and Sorento PHEV (MQ4 PHEV) vehicles produced from June 29, 2021 through October 1, 2021, which may exhibit a "Refill inverter coolant" message displayed on the instrument cluster due to poor flow of coolant/antifreeze inside the low-conductivity coolant pipe. In most cases, the inverter reservoir tank coolant may be filled to normal level and no diagnostic trouble codes (DTC)s are stored due to an increase operation of the electric water pump (EWP) that is 2,800 RPMs or more when checked. Follow the procedure outlined in this publication to flush out the low-conductivity coolant/debris inside the coolant pipe and replace the inverter coolant with the new improved formula, the reservoir tank cap label and to distribute the leaflet. Before conducting the procedure, verify that the vehicle is included in the list of affected VINs.

A Service Action is a repair program without customer notification that is performed during the warranty period. Any dealer requesting to perform this repair outside the warranty period will require DPSM approval.

Repair status for a VIN is provided on WebDCS (Service \rightarrow Warranty Coverage \rightarrow Warranty Coverage Inquiry \rightarrow Campaign Information). Not completed Recall / Service Action reports are available on WebDCS (Consumer Affairs \rightarrow Not Completed Recall \rightarrow Recall VIN \rightarrow Select Report), which includes a list of affected vehicles.

This issue number is <u>SA515</u>.

SUBJECT:

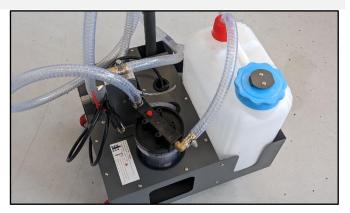

INVERTER COOLANT/DEBRIS FLUSHING/REPLACEMENT FOR CLUSTER MESSAGE "REFILL INVERTER COOLANT" (SA515)

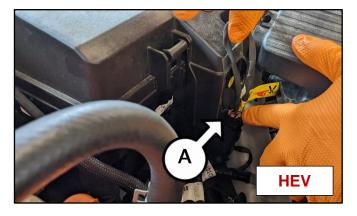

Repair Procedure: (HEV & PHEV)

- Refer to TSB <u>SST080</u> 'Coolant Flushing Machine Guide' for initial setup/cleaning instructions before beginning work.
- 1b. Fill the SST reservoir tank with water (1/2 full).

Note: 'New' coolant should <u>never</u> be added into the SST reservoir tank.

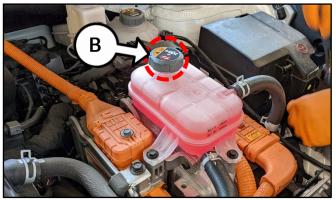

2. Open the hood and remove the service interlock connector (A).

• <u>HEV</u>

(HEV model shown above for reference purpose only)

Printed TSB copy is for reference only; information may be updated at any time. Always refer to KGIS for the latest information. TSB: SA515 (Rev 1) Sorento HEV, PHEV (MQ4 P/HEV) April 2023

- <u>PHEV</u>
- 3. Remove the coolant reservoir cap (B).

Note: Disregard pink color coolant in the images shown (for reference use only).

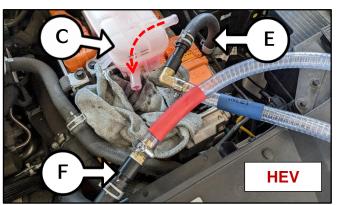

SUBJECT:

INVERTER COOLANT/DEBRIS FLUSHING/REPLACEMENT FOR CLUSTER MESSAGE "REFILL INVERTER COOLANT" (SA515)

 Drain the coolant from the reservoir (C) into an empty container using the SST kit 'syphon pump' (D).

(HEV model shown above for reference purpose only)

(HEV model shown above for reference purpose only)

5. <u>HEV</u>: Remove both the inlet (E) and outlet (F) circulation hoses (HEV model shown) from the coolant reservoir (C).

Connect the <u>Inlet</u> (E) and <u>Outlet</u> (F) hoses from the flushing machine to the detached circulation hoses (E and F) as shown.

Remove the coolant reservoir (C).

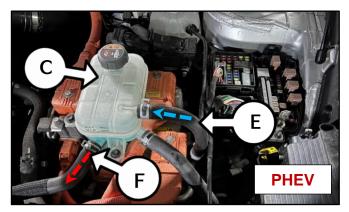

<u>PHEV</u>: Remove both the inlet (E) & outlet (F) circulation hoses (HEV model shown) from the coolant reservoir (C).

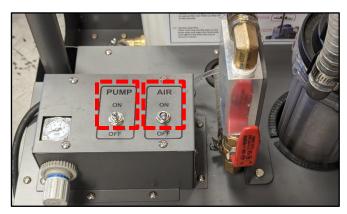

Connect the <u>Inlet</u> (E) and <u>Outlet</u> (F) hoses from the flushing machine to the detached circulation hoses (E and F) as shown.

Remove the coolant reservoir (C).

Turn the 'Air' <u>and</u> 'Pump' toggle switches of the flushing machine to the 'ON' position to begin the 1st flush of the coolant pipe. Follow the outlined instructions to complete <u>three</u> (3) coolant flushes for both HEV & PHEV.

NOTE: <u>An additional separate flush of the air</u> separator is required for PHEV ONLY.

Printed TSB copy is for reference only; information may be updated at any time. Always refer to KGIS for the latest information. TSB: SA515 (Rev 1) Sorento HEV, PHEV (MQ4 P/HEV) April 2023

INVERTER COOLANT/DEBRIS FLUSHING/REPLACEMENT FOR CLUSTER MESSAGE "REFILL INVERTER COOLANT" (SA515)

 Allow machine to run for <u>three</u> (3) minutes. (HEV and PHEV)

While machine is running:

 <u>Separately, clean/flush any remaining</u> <u>coolant/debris from the removed</u> <u>coolant resorvoir (C)</u> using clean water. Dry the reservoir (C) using an air gun.

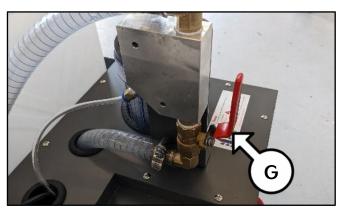

8. After the <u>three</u> (3) minutes have passed, <u>turn</u> <u>the flushing machine 'Pump' toggle switch to</u> <u>the 'OFF' position.</u>

Note: Keep the 'Air' toggle switch in the 'ON' position to drain excess coolant remaining in line for at least <u>thirty</u> (30) seconds.

Note: The coolant 'Pump' should be turned 'OFF' and the 'Inlet Valve' (G) closed. When the 'Inlet Valve' is opened, air may flow back and the coolant drain.

9. Detach the Inlet/Outlet hoses from the vehicle and then <u>reverse</u> (switch) <u>the flushing machine</u> <u>Inlet/Outlet hoses to the vehicle</u> as shown.

Note: Outlet to Inlet and Inlet to Outlet

10. Reinstall the coolant reservoir (C) in the reverse order of removal.

SUBJECT:

INVERTER COOLANT/DEBRIS FLUSHING/REPLACEMENT FOR CLUSTER MESSAGE "REFILL INVERTER COOLANT" (SA515)

- Turn the flushing machine 'Pump' toggle switch to the 'ON' position <u>and</u> allow the flushing machine to run for <u>three</u> (3) minutes to begin the 2nd flush of the coolant pipe.
- After the 2nd flush is complete, repeat step 8 for a 3rd flush to complete flushing of the coolant pipe.

 After the <u>three</u> (3) minutes have passed, turn the flushing machine 'Pump' toggle switch to the **'OFF'** position.

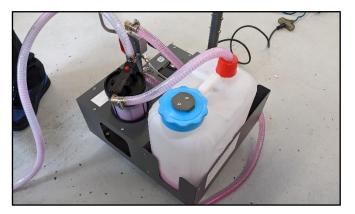

Note: Keep the 'Air' toggle switch in the 'ON' position to drain excess coolant remaining in line for at least <u>thirty</u> (30) seconds.

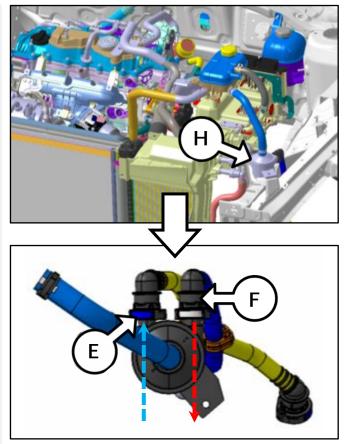

- <u>HEV ONLY</u> Skip to step 18.
- PHEV ONLY: Locate the two (2) inlet (E) & outlet
 (F) circulation 'quick-connect' hoses (PHEV ONLY) from the air separator (H) and disconnect them from the air separator.

🖌 TECH TIP

PHEV ONLY: The air separator (H) may be removed for more access.

- 15. Connect the <u>Inlet</u> and <u>Outlet</u> hoses from the flushing machine to the detached circulation hoses (E and F) shown.
- 16. Turn the 'Air' <u>and</u> 'Pump' toggle switches on the flushing machine to the '**ON'** position to begin flushing.
- 17. Allow machine to run for five (5) minutes.

Printed TSB copy is for reference only; information may be updated at any time. Always refer to KGIS for the latest information. TSB: SA515 (Rev 1) Sorento HEV, PHEV (MQ4 P/HEV) April 2023

SUBJECT:

INVERTER COOLANT/DEBRIS FLUSHING/REPLACEMENT FOR CLUSTER MESSAGE "REFILL INVERTER COOLANT" (SA515)

- Reattach the coolant reservoir (C) Inlet and Outlet hoses in the reverse order of removal and fill the coolant reservoir (C) on the vehicle with the applicable 'new' coolant/antifreeze for the vehicle.
 - HEV with Pink (LLC10) Coolant
 - PHEV with Blue (BSC-2) Coolant

<u>Note</u>: 'New' coolant should <u>never</u> be added into the SST reservoir tank.

 HEV & PHEV: Perform air bleeding using KDS by running the HEV Motor Control System > Electric Water Pump Control.

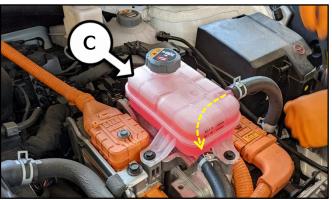

> <u>Note</u>: Continue filling the coolant reservoir on the vehicle with the applicable new coolant/antifreeze as needed to complete the air bleeding process.

> <u>PHEV</u>: Under Battery Management System using KDS, perform Battery EWP Operation Mode for Degassing and Circulation (Actuation Test).

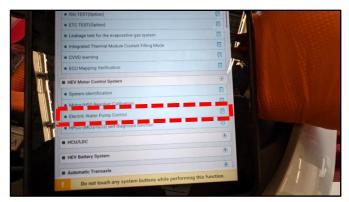

> Note: Continue filling the coolant reservoir on the vehicle with the applicable new coolant/antifreeze as needed to complete the air bleeding process. <u>The 'Battery EWP</u> <u>Operation Mode' will keep running until you</u> manually select 'Stop'.

- 20. Install the coolant reservoir cap and secure tight.
- 21. Confirm normal vehicle operation.

Refer to **TSB** <u>SST080</u> 'Coolant Flushing Machine Guide' for cleaning instructions after use.

SUBJECT:

INVERTER COOLANT/DEBRIS FLUSHING/REPLACEMENT FOR CLUSTER MESSAGE "REFILL INVERTER COOLANT" (SA515)

22. HEV ONLY:

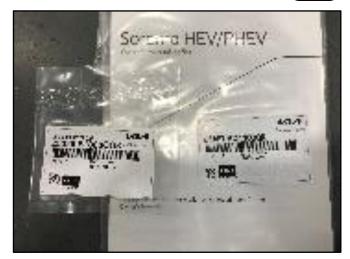

Replace the coolant reservoir cap (NG) with the new label (OK).

Use extreme caution when removing old label as sharp blades can cause serious injury.

23. Insert Leaflet in the Owner's Manual in the glovebox.
