

## **Service Bulletin**

# TECHNICAL

#### Subject: Changing Front Pedestrian Braking Alert Options Error

This Bulletin Replaces PIT5957. Please Discard all Copies of PIT5957.

Brand:	Model:	Model Year:		VIN:		Engine:	Transmission:	
Branu.	WOdel.	from	to	from	to			
Chevrolet	Traverse	2021	2023					

Involved Region or Country	United States, Canada		
Additional Options (RPOs)	Equipped with RPO UGN Radar Based Sensing		
Condition	Some customers may comment on not allowing the driver to change the option from Alert/ Braking to only alert or off. Pedestrian Braking feature is not affected, only the option for changing the alerts.		
Cause	The cause of the condition may be software anomalies.		
Correction	Verify the option is not available then reprogram the Active Safety Control Module.		
	618207		

### Service Procedure

Important: Service agents must comply with all International, Federal, State, Provincial, and/or Local laws applicable to the activities it performs under this bulletin, including but not limited to handling, deploying, preparing, classifying, packaging, marking, labeling, and shipping dangerous goods. In the event of a conflict between the procedures set forth in this bulletin and the laws that apply to your dealership, you must follow those applicable laws.

**Caution:** Before downloading the update files, be sure the computer is connected to the internet through a network cable (hardwired). DO NOT DOWNLOAD or install the files wirelessly. If there is an interruption during programming, programming failure or control module damage may occur.

- Ensure the programming tool is equipped with the latest software and is securely connected to the data link connector. If there is an interruption during programming, programming failure or control module damage may occur.
- Stable battery voltage is critical during programming. Any fluctuation, spiking, over voltage or loss of voltage will interrupt programming. Install a GM Authorized Programming Support Tool to maintain system voltage. Refer to <u>www.gmdesolutions.com</u> for further information. If not available, connect a fully charged 12 V jumper or booster pack disconnected from the AC voltage supply. DO NOT connect a battery charger.
- Follow the on-screen prompts regarding ignition power mode, but ensure that anything that drains excessive power (exterior lights, HVAC blower motor, etc) is off.
- Please verify that the radio time and date are set correctly before inserting USB drive into vehicle for programming, otherwise an error will result.
- Clear DTCs after programming is complete. Clearing powertrain DTCs will set the Inspection/ Maintenance (I/M) system status indicators to NO.

**Important:** The service technician always needs to verify that the VIN displayed in the TLC left side drop down menu and the top center window match the VIN plate of the vehicle to be programmed prior to using Service Programming System 2 (SPS2) for programming or reprogramming a module.

- For the TLC application, service technicians need to always ensure that the power mode (ignition) is "ON" before reading the VIN from the vehicle's VIN master module and that they do not select a VIN that is already in the TLC application memory from a previous vehicle.
- If the VIN that shows up in the TLC top center window after correctly reading the VIN from the vehicle does not match the VIN plate of the vehicle, manually type in the VIN characters from the vehicle VIN plate into the TLC top center window and use these for programming or reprogramming the subject module with the correct vehicle VIN and software and/or calibrations.
- The Engine Control Module (ECM) is the master module (for VIP vehicles) that TLC reads to determine the VIN of the vehicle. If the VIN read from the vehicle by TLC does not match the VIN plate of the vehicle, the ECM also needs to be reprogrammed with the correct VIN, software and calibrations that match the vehicle's VIN plate.
- The Body Control Module (BCM) is the master module (for GEM vehicles) that TLC reads to determine the VIN of the vehicle. If the VIN read from the vehicle by TLC does not match the VIN plate of the vehicle, the BCM also needs to be reprogrammed with the correct VIN, software and calibrations that match the vehicle's VIN plate.

**Caution:** Be sure the VIN selected in the drop down menu (1) is the same as the vehicle connected (2) before beginning programming.

Important: Techline Connect screens shown above.

**Important:** If the same calibration/software warning is noted on the TLC Summary screen, select OK and follow screen instructions. After a successful programming event, the WCC is located in the Service Programming System dialogue box of the SPS Summary screen. No further action is required. Refer to the Warranty section of the bulletin.

1. Reprogram the Active Safety Control Module. Refer to K124 Active Safety Control Module: Programming and Setup in the Service Manual.

**Note:** The screenshot above is an example of module programming and may not be indicative of the specific module that is being programmed. Module selection and VIN information have been blacked out.

**Important:** To avoid warranty transaction rejections, you MUST record the warranty claim code provided on the Warranty Claim Code (WCC) screen shown above on the job card. Refer to callout 1 above for the location of the WCC on the screen.

2. Record SPS Warranty Claim Code on job card for warranty transaction submission.

### Warranty Information

For vehicles repaired under warranty, use:

Labor Operation	Desc	cription	Labor Time
*2810435	Active Safety Control Modu	Use Published Labor Operation Time	
Important: *To avoid warrant	y transaction rejections, carefully	read and follow the instructions be	elow:
	Labour Time [Top]		
	Labour Operation Code:		
	Additional labour op code information:	SPS Warranty Claim Code:	
			6125814
The Warranty Claim Cod	e must be accurately entered in th	ne "Warranty Claim Code" field of t	he transaction
,	,	,	
Claim Codes in the "Corr	ection" field on the job card. Deal	or a programming event, it is requir ers must also enter one of the cod t. It is best practice to enter the FIN	es in the "Warranty Claim Code"

#### Warranty Claim Code Information Retrieval

	VIN	Module 873 - Televatios Communication Interface	Function Descention & factors	Warranty Claim Code	
NATION A		Corros Madule	Activistics		1-2
		69 - Body Control Module 63 - Actomatic Level Control Mardule	Programming C#		test test driver
		Ignition C66 Serial Data Gateway Module	Programming	-	test driver
10					
					Os Cancel

If the Warranty Claim Code was not recorded on the Job Card, the code can be retrieved in the SPS2 system as follows:

- 1. Open TLC on the computer used to program the vehicle.
- 2. Select and start SPS2.
- 3. Select Settings (1).
- 4. Select the Warranty Claim Code tab (2).

The VIN, Warranty Claim Code and Date/Time will be listed on a roster of recent programming events. If the code is retrievable, dealers should resubmit the transaction making sure to include the code in the SPS Warranty Claim Code field.

Version	1
Modified	Released April 25, 2023

GM bulletins are intended for use by professional technicians, NOT a "<u>do-it-yourselfer</u>". They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions, and know-how to do a job properly and safely. If a condition is described, <u>DO NOT</u> assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your GM dealer for information on whether your vehicle may benefit from the information.
