Title

Volvo Battery Electric Vehicles (BEV) - Diagnostic Trouble Codes (DTC) P116897 And P117616

Abstract

Volvo battery electric vehicles may display DTCs P116897 and/or P117616 on startup.

Valid for: VNR electric vehicles model year 2023 and newer.

Content

Published July 2023

Valid For

VNR electric vehicles model year 2023 to current.

Solution

Volvo battery electric vehicles may display DTCs P116897 and/or P117616 on startup. These codes prevent operation of components in the Traction Voltage System (TVS).

At this time, the codes are likely set due to a software issue. This will be corrected in a future software release.

If P116897 and/or P117616 are encountered on key on:

- Cycling the key to Off and back to the Run position will clear the active codes and allow normal operation.

Other occurrences of these codes, or persistence through key cycles should be diagnosed using normal procedure.

This solution will be updated when further information is available.
