

SEAL TOFINO FRONT ROOF CLEARANCE LIGHTS, ANTENNA, PERMITER CAP

1. Clearance lights ---add silicone sealant to the clearance lights. It should fill any gap that may be left over when tightening down. Screws should be sealed so should have no issue.
You may even have to put some in the screw holes before a screw is put through the lens.

No need to access the lights on the interior, just remove the screws on the exterior and flip the light over. There will be enough slack in the wiring to pull the light a few inches away from the roof and apply silicone.

We use Dowsil 733 RTV sealant which is clear in color. You can either do a perimeter seal on the lights or you can remove and add sealant to the bottom of the light and re-secure.

Any clear silicone whatsoever should do the job, Pleasure-Way part number is 3991 if ordered from a PW dealer.

4. Stains ---clean stains using steam cleaner.
