

## HEADLAMP WASHER JETS LEAKING

### Customer Voice:

- The headlamp washer jet nozzles are leaking fluid when not operating the washers.

### Technical Description:

- The check valve in the headlamp washer jet hose assembly may not be sealing properly, allowing washer fluid to siphon out of the wiper jet nozzles.

### Status:

- **SSM 76076** has been published to address this concern.
- Revised washer one-way check valves are being introduced in production.
- The check valves are only serviced as a headlamp washer hose assembly.
