New Enhancements for Your Fisker Ocean One

Hello [Name],

While we continue to increase production and deliveries of the launch-edition Fisker Ocean One, our team is also developing new ways to enhance and improve your vehicle and app experience. We are pleased to announce several improvements for your Fisker Ocean One.

Software Update Highlights for FM29 OS 1.07/ICC27*

Enhancements to California Mode

Existing Fisker Ocean One drivers will soon see improved performance and consistency with their Fisker Ocean's California Mode operation. This update will come through an OTA (over-the-air) update. We will contact you via email in the upcoming week to schedule this OTA update,* which should take about 10 minutes to complete. Note: All Fisker Ocean Ones delivered after September 12, 2023, will have this enhancement already installed.

Expanding OTA Update Capabilities

We have expanded our OTA update capabilities to include the Motor Control Unit system. What that means for you is a faster, more robust way to enhance your vehicle without ever leaving your driveway. To add this enhancement, you can drop your vehicle off at a Fisker service facility or schedule a Fisker technician to come to you to complete the installation.

Please contact a Fisker Rådgiver to schedule a service appointment. This exciting upgrade, and the service required to complete it, are available to you free of charge. Note: All Fisker Oceans delivered after September 12, 2023, will have this capability already included.

Hardware Upgrades

Upgraded Seat Mats (Driver Presence Detection Mat)

We've upgraded the seat mats in the Fisker Ocean for better occupant detection. If your vehicle arrived before September 1, 2023, and you're having trouble shifting into gear while in the driver's seat, contact a Fisker Rådgiver for a free inspection and service appointment. All Ocean Ones delivered after September 1, 2023, already have this upgrade included. If you recently updated your vehicle software with us, we took the opportunity to also upgrade your seat mats.

More Robust Air Vents

We recently worked with our air vent supplier to increase the durability and reliability of the air vents installed in the Fisker Ocean. In rare cases, we have encountered some vehicles built before September 1, 2023, equipped with air vents susceptible to nozzle breakage. If you are experiencing any air vent issues or hear an abnormal clicking when operating your vents, please contact a Fisker Rådgiver for a complimentary inspection and, if needed, a free service appointment. All Ocean Ones delivered after September 1, 2023, already have this upgrade included. If you recently updated your vehicle software with us, we took the opportunity to replace your air vents.

Upcoming Software Enhancements for September

Future Fisker Ocean OTA Updates

- Enhanced Bluetooth pairing, connectivity and functionality
- An energy saving mode to help reduce battery consumption when the vehicle is not in use
- Wi-Fi connectivity for OTA updates
- Improved navigation performance
- Other bug fixes and feature enhancements

Future My Fisker App Updates

- Improved app stability for a more reliable and consistent connected car experience

If you have any questions or require assistance, please contact a Fisker Rådgiver.

Contact Support

*Installation of FM29 OS 1.07/ICC27 is contingent upon the successful installation of vehicle software release FM29 OS 1.06.
