

TLX Type-S Front Brake Groan Noise

AFFECTED VEHICLES

Year	Model	Trim Level
2021–23	TLX	Type-S

Do you have a TLX Type-S with a groaning noise from the front brakes at slow speeds, primarily while turning?

The TLX Type-S braking system is a high-performance Brembo brake system that is equipped with high-friction brake pads, specifically designed for superior braking performance and response. As a result, the brakes may exhibit a groan, squeal, or squeak noise, most commonly after the vehicle sits for a prolonged period and the brakes are cold. This noise will typically disappear after the first few brake applications.

AHM has confirmed that everything is working exactly as intended, and there is no performance, durability, or safety issue with the brakes.
