

GPOP - Issue Review System

Part Number: 04893782A\$

Part Description: PSU Oil Pump Assy

Issue 22MY & 23MY 3.6L PSU Engines reported with P06DD MIL (low engine oil pressure);
Description: oil pump solenoid valve will not change from low to high pressure. Current diagnostic procedure has led to replace oil pumps when these perform as expected and are perfectly functional. All PSU engines that arrive to dealers due to P06DD should follow the current diagnostic procedure up until step #4. When reaching this step, dealers should review Star Online Publication S2309000012 where some additional steps are included in order to make the diagnostic more robust (OBD logic).
