

## **SSM 52206 2024 Lincoln Nautilus - Reserve And Black Label - Knocking Type Noise From Rear Shock Absorber Area**

Some 2024 Lincoln Nautilus vehicles equipped with the Reserve and Black Label packages may exhibit a knocking noise from the rear shock absorber area of the vehicle while driving at speeds between 8 mph and 19 mph (13 km/h and 30 km/h) on rough road surfaces or when going over bumps. If the concern is isolated to the rear shock absorber assembly, replacing it at this time is unlikely to resolve the concern and is not recommended. This concern has no effect on vehicle operation or durability and is currently under investigation. Repair direction is expected late Q1 2024. Schedule a service appointment for this timeframe and monitor OASIS for additional information.
