

OTA v2.1.60 Creature Comfort Mode

New Feature & Fixes

- With this update we are introducing Creature Comfort Mode. This feature was added to allow you to leave your pets in the vehicle with the climate control set to your desired temperature. Using this, you can keep pets comfortable and safe while you are away from your vehicle. While you are away, we prominently display that Creature Comfort Mode is active and that your pet is safe in the unattended vehicle. Be aware that your HVAC system will cut off when your Battery Charge falls below 1%, which will result in Creature Comfort Mode turning off as well. You will get a notification on your Mobile App when your range falls below 10 Miles (approx. 2%). Creature Comfort Mode settings can be enabled under HVAC while remaining in Park. It will be activated when the driver exits the vehicle and the driver's side door is closed and deactivated when the driver's side door is opened.
