

2023 MY CORSAIR
(IPC)
FPU 23-PU0630-SX2-CLS

WHAT'S IN THIS UPDATE?

Lincoln Enhance

Lincoln BlueCruise

Lincoln BlueCruise (also known as ActiveGlide) is an available hands-free driving technology that operates on 97% of controlled access highways in areas called Hands-Free Blue Zones across the U.S. and Canada. The renamed feature has all the same capabilities as before, allowing the driver to take their hands off the steering wheel on certain roadways while the system accelerates, brakes, and steers the vehicle in the lane. The system uses a driver-facing camera to ensure that the driver is paying attention to the roadway while the system is actively providing support.

Lincoln Enhance delivers software updates that are designed to make your Lincoln Corsair® SUV better over time.
