

## Ocean OS 2.0 Update

Hello Spencer,

We're reaching out to inform you that your vehicle software is ready to be updated with the newly released Ocean OS 2.0 software. This update will bring new features, bug fixes, and enhancements that improve the overall performance of your Fisker Ocean.

If you haven't already, you should soon receive an opt-in notification that states your vehicle is ready to install Ocean OS 2.0 (1 of 2). You can accept this opt-in notification directly from your vehicle's Central Touchscreen.

For your convenience, Part 2 of this update will no longer require your opt-in approval. Please follow the new installation steps below to ensure a fast and successful OTA update.

### New Ocean OS 2.0 Installation Steps

1. When your vehicle is ready to install an update, you will receive a notification on the Central Touchscreen. (You can also activate the installation process at the Software tab in the Settings menu of the Central Touchscreen when it's available.)
2. Ensure your vehicle's battery level is at least 25%.
3. Tap "Accept" and then "Start Installation" and follow the instructions that appear on the Central Touchscreen.
4. Roll up all windows and exit the vehicle. Do not leave children or pets inside the vehicle.
  - Remove heavy items from the seat. (They may trigger the occupancy sensor, which will disrupt the update).
5. Close and lock all vehicle doors.
6. After 5 minutes, your software update will begin.
7. Note: After Part 1 of 2 is complete, Part 2 will automatically roll out in waves beginning tonight at 8 pm PDT. If you need to use your vehicle while the OTA update is in progress, the installation will pause temporarily. It will automatically resume after you've finished your drive.

If you have any questions or concerns, please contact support.
