

Your Vehicle Software Will Update Tonight

Hello Spencer,

We're reaching out to inform you that your vehicle software will be updated with the newly released Ocean OS 2.0 software tonight. This update will bring new and improved features, bug fixes, and enhancements that improve the overall performance of your Fisker Ocean.

If you are receiving this email, your update is scheduled for tonight at 8 pm PDT.

For your convenience, this update will no longer require your opt-in approval. Please follow the new installation steps below to ensure a fast and successful OTA update.

New Ocean OS 2.0 Installation

(Please complete the following steps by 8pm PDT)

1. Ensure your vehicle's battery level is at least 25%.
2. Roll up all windows and exit the vehicle. Do not leave children or pets inside the vehicle.
 - Remove heavy items from the seat. (They may trigger the occupancy sensor, which will disrupt the update).
3. Close and lock all vehicle doors.
4. Vehicle updates will roll out in waves. If you need to use your vehicle while the OTA update is in progress, the installation will pause temporarily. It will automatically resume after you've finished your drive.
