

Turning on Victron Energy Inverter Using Cerbo GX Touch 50

Note: All 2024 Ember Overland with Max Solar ship with the inverter in the 'Off' state.

Purpose

This document explains how to turn on the Victron Energy Inverter using the Cerbo GX Touch 50 when receiving a 2024 Ember Overland with Max Solar from the factory.

Procedure

1. Locate Cerbo GX Touch 50
 - a. The device will be located near other appliance control panels near the entry door and will have a grey protection cover over it.
 - b. Remove the grey cover.

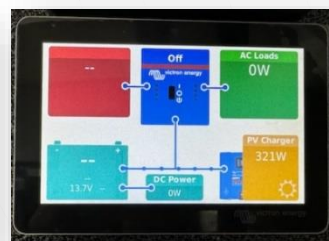

2. Activate the Cerbo GX Touch 50
 - a. Touch anywhere on the screen to wake the panel up.
 - b. One of the following pages will light up. Note: Page visibility will vary depending on what page the panel went to sleep on.
 - c. If Figure A is the page visible swipe to the left to have the page in Figure B visible.

Figure A

Figure B

3. Turn Inverter On

Note: In the event the Inverter states 'Inverting' this step does not need to be completed as the inverter is already on.

- a. Select the inverter figure and then 'Menu' as shown in Figure C.
- b. Select device 'MultiPlus 12/3000/120-50 120V' as shown in Figure D.
- c. Select 'Switch' as shown in Figure E.
- d. Change 'Switch' from "Charger Only" to "ON" then select the check mark as shown in Figure F. You will hear an audible click inverter will switch on and 120V power is powered on in the unit.
