[Steering](#)

[Other Minor Updates & Improvements](#)

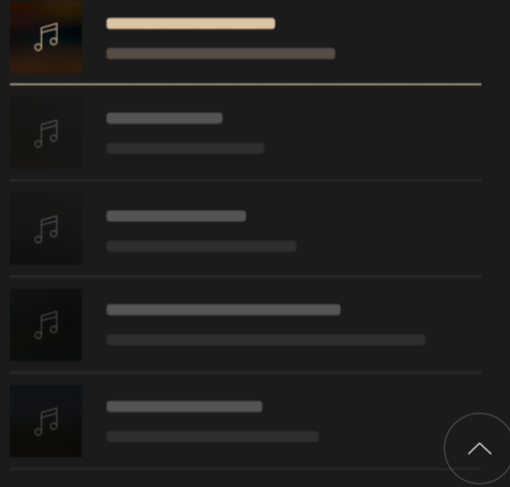

APPLE CARPLAY™

We have improved CarPlay connectivity and media play back issues. We have introduced the capability to initiate reconnection directly from the Home screen when an iPhone initially fails to connect to CarPlay.

We worked with our partners in SiriusXM to provide an enhanced user experience. Content browsing is now supported.

We have updated the Sirius XM playback capability to prevent the possibility of dual audio during a phone call.

Repeat and Shuffle Feature Enabled

- Enhancement to your USB experience with the introduction of the Repeat and Shuffle feature. Now, you can enjoy your favorite tracks in a whole new way, adding more variety and flexibility to your music playback.

Improved USB Integration with Media App

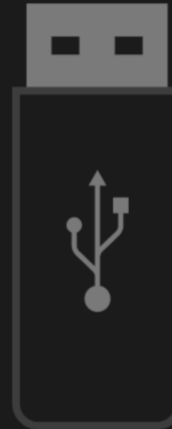

- Enhanced integration between your USB device and the Media app to support the recent list for recently played tracks.

Seamless Transition and Track Display

- The Media app will now notify the Home app of your recent track plays, allowing you to see your recently played tracks directly on the Home app screen. Additionally, the Home app will accurately reflect recent tracks even when you skip tracks using the steering wheel buttons, ensuring consistency in your music playback experience.

Resume Playback Feature for USB Media

- Enjoy uninterrupted music playback with the USB media's ability to resume from where it left off if you switch away from it.

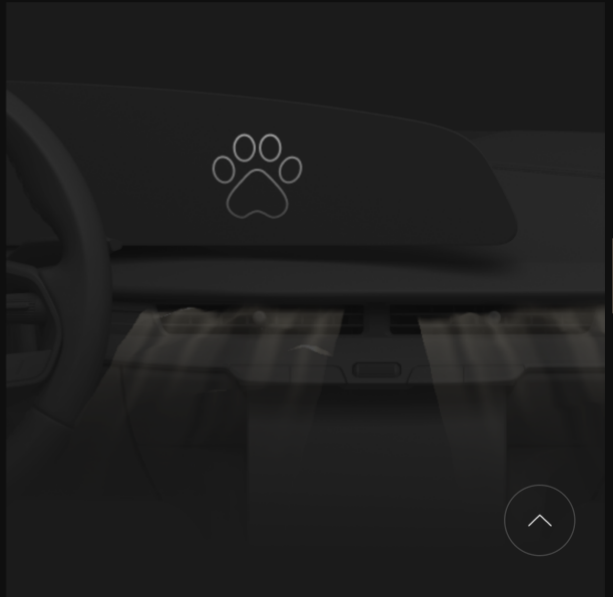

CREATURE COMFORT/ KEEP MODES

We have made updates to Creature Comfort and Keep Modes. These modes can be turned off through a press and hold button on the display.

Please be aware that your HVAC system will cut off when your battery charge falls below 2%, which will result in Creature Comfort Mode turning off. You will get notifications on your Lucid mobile app as your battery level runs low warning you to return to the vehicle before the mode turns off.

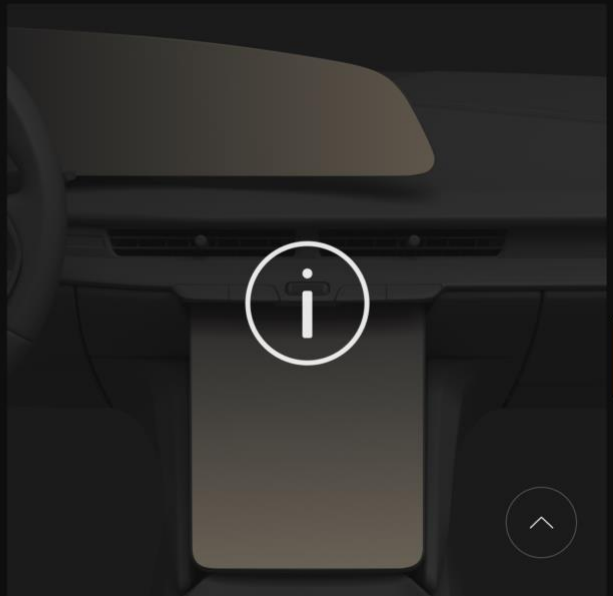

We are preventing installation of manual and scheduled OTA software updates while the Creature Comfort Mode is active.

Exterior lights will be turned off when Creature Comfort mode is active & vehicle is locked. The hazard lights can still be activated.

LIMITED REGENERATIVE BRAKING NOTIFICATION

We added notifications alerting you when regenerative braking is limited.

STABILITY CONTROL

We have added user selectable options for the Lucid stability control feature in the Air Pure rear-wheel drive vehicles.

STEERING

We have improved steering feel in the Air Pure rear-wheel drive vehicles.

OTHER MINOR UPDATES & IMPROVEMENTS

- We have improved the key fob detection when it is placed inside the cup holders.
- We have improved scheduled charging where the vehicle may start charging immediately if it is unlocked using a key linked to a different profile than the last active profile.
