

## Rescindment of Recall FL999 Alcoa Steer Wheel Inner Flange

Communication Type: Campaigns

Date: 5/30/2024

Colleagues,

Upon further discussions with the supplier and with regulators, DTNA and the parties involved in the recall declaration determined that there was no **recallable** defect associated with **DTNA Recall FL999** and, consequently, rescinded the recall. In its place, Alcoa has implemented a special warranty program\*.

Vehicles currently on hold at dealers or distributors may be inspected\*\* to determine if there are any cracks in the wheels, per the instructions linked below. If so, the wheels should be replaced, with the cracked wheels sent back to Alcoa for inspection per the instructions linked below. Once that is done, the vehicles may be released into commerce.

Any questions you may receive from fleet customers about wheels already in service should be directed to the Alcoa Warranty Claims Line: 1-800-242-9898 (Press Option 1)

Thank you,

DTNA Campaign Team
