Title	Walk away locking (WAL) & approach unlocking (AUL) inoperative
Category	Body
Last modified	21-Jun-2024 00:00:00
Symptom	112000 Latches/Locks & Security

Content

Issue: The walk away locking and approach unlocking (WALAU) feature will not lock and/or unlock vehicles with passive entry and passive start (PEPS) specification.

Cause: Software error within the RFA unit from first VIN: **SALCA2AN1RH352365**

Action: A future software update will be released for all affected vehicles and clients will be contacted. Clients should be told on handover that vehicles are safe to use but **must** be locked and/or unlocked through the smart key fob or the door handles.

Clients will know if a vehicle is locked as the indicator lights will flash for a brief period and the door mirrors will fold inwards. The owner can disable the automatic door mirrors' function.

To support retailers, technical guidance will be available for the necessary software update in a Global Service Action bulletin for affected vehicles.
