# New GranTurismo OEM Goodyear Tire Characteristics

DATE: July 15, 2024

This Technical bulletin provides additional info regarding the New GranTurismo equipped with OEM Goodyear tires.

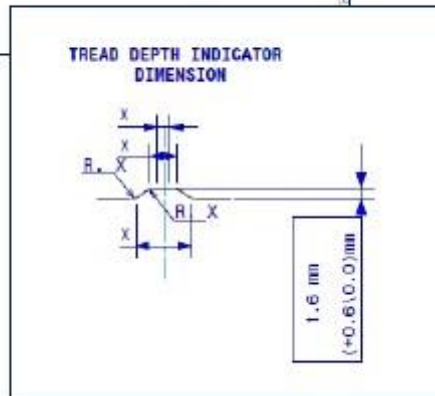

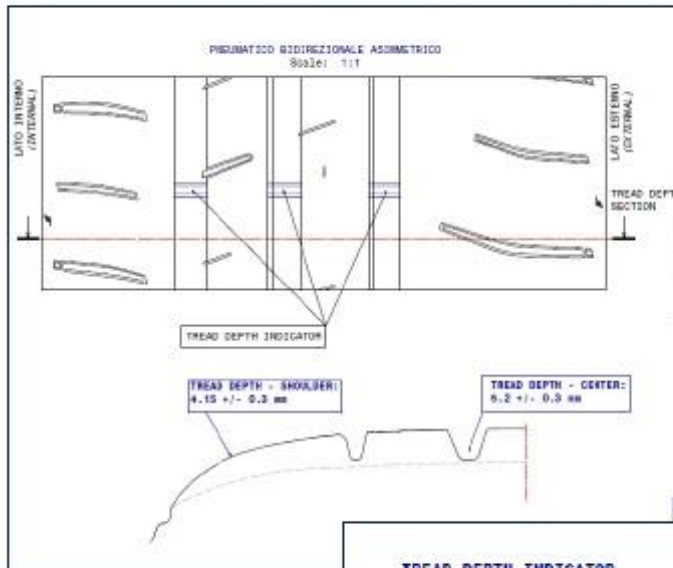

**MODELS:** M189 GranTurismo (All MY).

The New GranTurismo is factory-fitted with specific Goodyear tires chosen by our engineers to emphasize the sports characteristics of the vehicle.

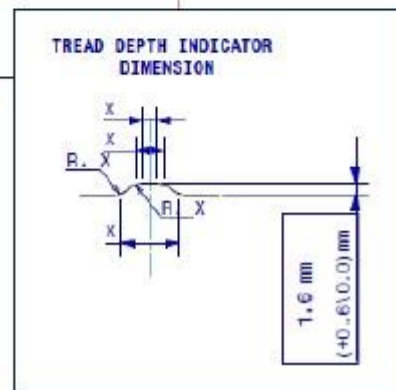

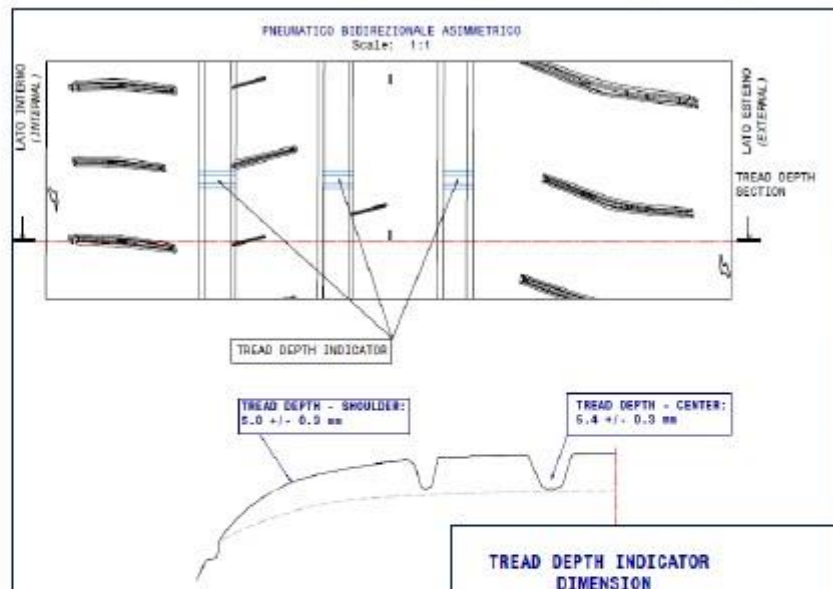

The New GranTurismo is factory-fitted with specific Goodyear tires specifically chosen by our engineers to emphasize the sport characteristics of the vehicle.

The characteristics of this tire consist of a particularly soft compound and a reduced thickness of the tread. These elements allow the tire to have minimal tread deformation and an optimized footprint. Despite the sporty features, these tires are validated to guarantee the target average life when used on normal road conditions. In the page below you will find the technical drawing of this tire to confirm the tread depth specifications of a new tire.

FRONT – 670159209 – 265/30 ZR20 (94Y)

REAR – 670159210 – 295/30 ZR21 (102Y)

		Worst case
Δ Tread Depth vs Tread Indicator	Front	2,7
	Rear	2,9

The soft compound of this tire and the test drive carried out on 100% of the cars on the internal left-handed testing track, could generate a slight graining effect on the tread surface which does not affect the characteristics and safety of the tire. This is expected to disappear after few hundred Kilometers of road usage. This condition has already been analyzed by our technicians in collaboration with Goodyear, confirming compliance of the tires with standards. Below is an example picture of the allowed delivery status of tires. This condition should therefore not be considered as an issue.

Please do not hesitate to contact us for any questions you may have.  
Kind regards,
