Subject: Water pumps

Sounds like your water pumps were turned on. I got the following note:

Good news for your Friday: two VINs have already been successfully updated, and the majority of the rest are in the "installed" status. Just as a reminder: in order for the update to take place, it'll need a key on, let it run for a few minutes, and then key cycle, and it should be good to go. And the conditions are as follows:

Ignition on = true

Vehicle moving = false

Parking brake set = true

Engine running = false

Thanks!
