Subject: Customer Information

Track use of Michelin XLTL Pilot Sport Cup 2 K1 tires

Please inform the owners of the models in question that the **Michelin XLTL Pilot Sport Cup 2 K1 tires** fitted on these vehicles **are not suitable for track use.**

This information must be communicated to the Customer when the vehicle is initially delivered to the Customer. If the vehicle has already been delivered, the Customer must be contacted urgently.

Track use' refers to driving the vehicle on a closed course under extreme conditions with vehicle handling and performance pushed to the limit.

The risks involved in using these tires **on the track** are:

- **Reduced performance:** the tires may not provide the level of grip and handling expected for track driving.
- **Increased risk of tire damage:** the tires may be subject to increased risk of puncture, sudden loss of pressure and tread separation.
- **Loss of control of vehicle:** This may occur if there is poor grip or tire failure which could cause accidents and, potentially, personal injury.

In order to inform Customers and make them aware of these risks, a document to be printed on your letterhead is attached to this **Technical Information**.

This document must be signed by you and the Customer; it must be kept in your files and uploaded to the ADP portal.

Please Note: FNA will inform the Dealerships when there is a solution available.

Thank you for your co-operation.
