

SSM 52822 2024 F-150 Non-Lightning - Equipped With BlueCruise - Back And Forth Movement Of the Steering Wheel In The Lane And/Or Vehicle Movement In The Lane With The BlueCruise Feature And/Or The Lane Centering Feature Active

Some 2024 F-150 non-Lightning vehicles equipped with BlueCruise may exhibit a subtle back and forth movement of the steering wheel with the BlueCruise feature and/or lane centering feature active. Customers may report an intermittent steering wheel oscillation and/or that the vehicle drifted slightly to the left and right while in the lane. This may be due to the software in the power steering control module (PSCM). To correct this condition, reprogram the PSCM to the latest software level using the latest software version of the Ford Diagnosis and Repair System (FDRS) scan tool. For claiming, use causal part 3504 and applicable labor operations in Section 10 of the Service Labor Time Standards (SLTS) Manual.
