

## L460 / L461 WALK AWAY LOCK / APPROACH UNLOCK

### Customer Concern

"When can I get Walk Away/ Approach feature back"

"I was advised to turn off to prevent issues, when can I turn back on"

- 22-23MY Walk Away / Approach features removed from vehicle through CCF change
- 24MY feature disable in touch screen was advised.
- Technical description
- Concern identified with RFA software older than -AX which could lead the following:
  - Battery Drain
  - Passive/Active key recognition fault
  - Start/Gear select fault with ABS DTC P0602 (Workflow available for this DTC on 24MY Powertrain > Warnings > Warning Light / Lamp Illuminated > Engine Malfunction Indicator Lamp (MIL))
- New -AX level RFA software available which corrects these concerns allowing Walk Away / Approach feature to be enabled with no affect to vehicle performance.

### Recommended action

- Campaign and Workflow to update RFA and amend CCF options (CCF only 22-23MY) coming.
- Until this is available, please reference **SSM76145** on how to address enabling Walk Away / Approach passive features on 22-24MY L460 / L461 with the corrected -AX RFA Software.

### Range Rover

- 22-24MY Range Rover
- 23-24MY RR Sport
