

KNOCK TYPE NOISE WHEN BRAKING WITH CARBON CERAMIC BRAKE DISCS

Customer Voice:

- There is a knock type noise from the front of the vehicle when braking at low speeds.

Technical Description:

- A knock type noise emanating from the front brakes may occur on initial braking from around 10 mph if the carbon ceramic brakes were not bed-in.

Status:

- A TOPIx Cloud Workflow Test Plan has been created to address this concern, providing the bed-in process and validation test.
- The Workflow will be listed under the customer symptom of “Brake Judder” and will lead you to “Carbon Ceramic Brake Judder – Test”.

Range Rover

- 24MY RR Sport SV (with carbon ceramic brakes only)
