

Upcoming HDEP Running Change Releases (8/2/24)

2024 Running Change #2 – MCM & ACM Release

- Will contain fixes that were originally planned for mid-year release.
 - Primary are DD16 overtemp reductions at 2200ft, DD16 2659/0 resolution, DD15 521173/21 resolution and DD16 MCM PTO Gov5 calibration corrections.
 - 2024 DD13HP Gov5 changes not included in this release but will be covered in MY25 SOP alongside the DD13 521173/21 correction in late Q125.
- Submission date expected week of August 12th, pending final review and CRA signoff.
- Due to size and content of releases contained in this package, TCT approval for bypassing the 30-day wait period was declined.
- This would move earliest service testing date to week of September 16th (30 days after submission date minimum).
- Reservoir testing and then field testing that can be done only AFTER regulatory approval.
- Free service release to all units would occur in mid-September IF field testing is successful.

2023 Running Change #2 – MCM, ACM and CPC Release

- Will allow above 2024 software package to be used on Gen5 engines built between 2021 and 2023.
 - Excludes DD13TCO builds – 2024 builds do not contain this engine variant so they are set at 2023 software permanently.
- Intended to be submitted at same time as the 2024 RC2 listed above.
- Service availability pending same approvals as above with release in September 2024.
