

SSM 52915 2024 Bronco Sport/Escape, 2025 Explorer - Dealer Installed Option (DIO) SecuriCode® Remote Keyless Entry (RKE) Wired Keypad Installation

Some 2024 Bronco Sport/Escape and 2025 Explorer vehicles may have been ordered with a DIO SecuriCode® RKE wired keypad that requires installation and enabling by the dealer prior to delivery. To install the wired keypad refer to Workshop Manual (WSM), Section 501-14 > Keyless Entry Keypad Removal and Installation. It is critical to follow the Front Upper Door Moulding removal and installation steps completely, including the removal of all fasteners and the use of a trim removal tool, to prevent damage to the components that are removed and reinstalled. Once the SecuriCode® RKE wired keypad has been installed it must be enabled using the Ford Diagnostic Repair System (FDRS) BCM - Remote Keyless Entry (RKE) Wired Keypad Code Programming application. Refer to the instructions available on PTS at Workshop Tab > Accessories > Installation > Electrical > 2024MY Bronco Sport, 2024MY Escape, 2025MY Explorer, SecuriCode® Keyless Entry Pad. Payment for Installation is automatically credited to the Ship-To Dealer on the Miscellaneous Parts Statement and should not be claimed as a warranty repair. Refer to the Warranty and Policy Manual for Ford Licensed Accessories for additional DIO program information.
