

# October 2024 MDEG Updates

- Some units (predominantly DD8.1/8.2) are still faulting for 4364/17 after updating to the latest fuel maps released in December 2022.
- DD8.1 Field Testing
  - Revised 2<sup>nd</sup> Test calibration setup on test units starting on August 28th, 2024.
  - **This calibration will be released to all DD8.1 units on October 29<sup>th</sup>.**
  - Test units have shown positive improvement, but additional identified changes will also be coming in 2025 for continued resolutions.
- DD8.2 started test cell work on July 22<sup>nd</sup>, 2024 and is building off the work done on 8.1.
- DD5 planned to begin testing in mid-November upon 8.2 completion.
- A defined release timeline for DD8.2 or DD5 is not available.
  - Testing needs to be completed and will continue to build off the work completed and tested on the DD8.1 units above.

**All attempts are being made to complete release of DD8.2 and DD5 calibration updates before the end of 2024 but will depend on the completion of testing and calibration release process. It is possible that these engines will have this update released in early 2025.**

Included engine model reference:

DD5 = 934914

DD8.1 = 936913

DD8.2 = 936917

**For limited distribution - Contains Preliminary and Pre-decisional Information Material Only**
